Side Atlas

Side Atlas Look and Feel

Design spec · v1.4 · 17 October 2026 · desktop · MONEY TALKS 2 demo build

What's new in v1.4 · all your side income, bookkeeping and rewards

- **All side income in one place.** Statements plus your own entries: income from a source you name (Tutoring, Logo commission) and expenses by category. Every income source sits next to the platforms on Overview; manual rows carry an "Added by you" tag. Notes stay in this browser.
- **Bookkeeping.** The Ledger mixes platform records, your income and your expenses, with All / Income / Expenses chips and "Add entry" beside "Add statements". Overview adds expenses by category and **Kept after expenses** (net income minus your expenses). The hero stays income first; the Tax page is unchanged.
- **Rewards.** A monthly income goal (progress, ended short, reached with Atlas celebrating) and eight milestone badges computed by `daoshou/rewards.py`. Milestones is a utility link in the sidebar foot with an "earned of total" count; the latest badge also sits on Overview. The nav stays at four.
- **Seven new drawings** (18, 18b, 19, 20, 21, 22, 22b), nine components (§4), icons 30 → 34 (plus, pencil, target, award). Numbers: the real `/api/personal/overview` and `/ledger` endpoints in-process, on C01's statements and the manual-entries fixture.

What's new in v1.3.1 · signed-off details

- **Every privacy line matches the build** (`docs/personal_api.md`). The browser replaces account IDs with labels before upload; the server receives the statement rows with those labels, calculates in memory and keeps no copy; Ask Atlas gets your question as typed and computed totals, with accounts as fresh codes on every request; PRISM gets step and tool names, timings, token counts and status, never the question, answer, tool data or amounts. New privacy-center row: **Exchange rates**, the server fetches ECB rates only for a currency you have no rate file for, sending only currency codes and a date range.
- **Labels have four digits** everywhere: `Upwork · acct ••7426` .
- **Five new drawings:** 12b the delete-all confirmation, 15 Tax with tax home Both (two countdowns, US and China sections stacked, a foreign-tax-credit flag that never states tax owed), 16 the empty

state before any import, 17 the Ledger in CNY without a rate file (ECB rates, weekend rows on the Friday before) and 17b the same month with your rate file and one missing date (stop card, row left out, totals incomplete).

- **Rate rule** (decision #45): a rate file you upload is used exactly; a date it lacks stops the record. Only a currency with no rate file of yours uses ECB reference rates, a weekend or holiday taking the last publication on or before its date (at most 7 days back). One currency never mixes the two sources.
- **Six components** (§4): empty-state card, two-countdown hero, facts row, rate line, confirmation dialog, filled danger button (dialog only).
- **Screens 01 to 08 re-captured** with the v1.3 shell. Their content is still the v1.1 drawing; the built product is the reference for the v1.2 changes on those screens. Leftover dashes in their copy were replaced.

What's new in v1.3 · Your data, privacy, China tax home

- **Your data mode.** People bring their own income by uploading the CSV statements they download from each platform (upload only, no manual form). A **Your data / Demo data** switch sits under the logo; the nav stays at four screens. **My data** and **Settings & privacy** are utility links in the sidebar foot.
- **Privacy model (drawn, to be built):** statements, records and settings are kept in this browser; the server calculates on request and keeps no copy; there is no account. Ask Atlas receives computed totals with pseudonymised labels (`Upwork · acct ••7426` since v1.3.1); PRISM traces in this mode are content-free (tool names, timings, pass or fail). **Delete all my data** clears the browser; **Export backup** downloads one JSON file.
- **Tax home US / China / Both and display currency USD / CNY.** The China tax home shows Bilibili's withholding, a countdown to the annual filing window (March 1 to June 30, 2027 for tax year 2026) and flags income from platforms outside China for the accountant. Side Atlas calculates no Chinese tax.
- **Five new screens** (10 to 14), all with real ledger numbers from `daoshou/ledger.py` ; **eleven new components** (§4); **icons 25 → 30** (shield, lock, trash, server, monitor).
- The prototype shell now matches the built product (pigeon logo, four-item nav).

What's new in v1.2

- Palette: soft violet #6B5BC2 + pink #FF7AB6 (replaces forest green), WCAG AA fixes for four pairs.
- Mascot Atlas (pigeon, crescent ^ ^ eyes, flat sticker style) with size tokens; logo = the pigeon-head app icon; lockup text "Side Atlas" only.

- Nav cut to four screens (Overview, Ledger, Tax, Ask Atlas). Sources → Import statements drawer on Ledger; set-aside settings → editable rate on the Tax hero; Report → Export button on Tax; other creators → creator picker with a warn dot.
- Duplicates merged and clutter removed (see decisions #19–#28). Kit PNGs were not re-exported; the product captures in web/_checks/v12-*.png are the reference.

What's new in v1.1

- **Stop state reworked (user ruling).** The full maroon hero is retired. A stopped calculation keeps the forest hero (partial total, marked incomplete) and shows a light warning card beside it: warn tint, maroon only for the label, icon, left rule and the word "missing".
- **Form view vs bank view uses real numbers** from `GET /api/forms`: $14,356.59 on forms vs $11,956.06 landed (gap $2,400.53); possible duplicate = Fiverr (paid out to PayPal); no 1099-K platform over the real $20,000 AND 200-transaction threshold; form types are simulated and labelled.
- **Three new screens:** 07 Sources (import), 08 Set-aside settings (interactive), 09 Ask in Chinese (steps from a real v2 run).
- Three icons added (upload, sliders, file → 25). Prototype colours now come only from `--sa-*` tokens, including the logo, so the palette can be swapped in the token file alone.

What this is

The first complete visual language for Side Atlas, the ledger for global side income with a tax layer on top. Everything here — tokens, components, every desktop screen — is decided at once, in one version. The clickable prototype is `07-mockups/app.html`; the screen images in `08-screens/desktop` are exported from it with real numbers from the fictional test set.

Reference. Linktree, for **form**: big rounded cards, pill buttons, heavy rounded headline type, one bold colour field per screen. Not for colour. Side Atlas has its own palette built around a deep forest green (the user's choice).

The brand test. A screen passes if it reads like a creator's own money notebook — one confident forest-green field, calm white tables, every figure dark and tabular — and fails if any number sits on a bright colour or the page looks like a sticker sheet, even when every token matches.

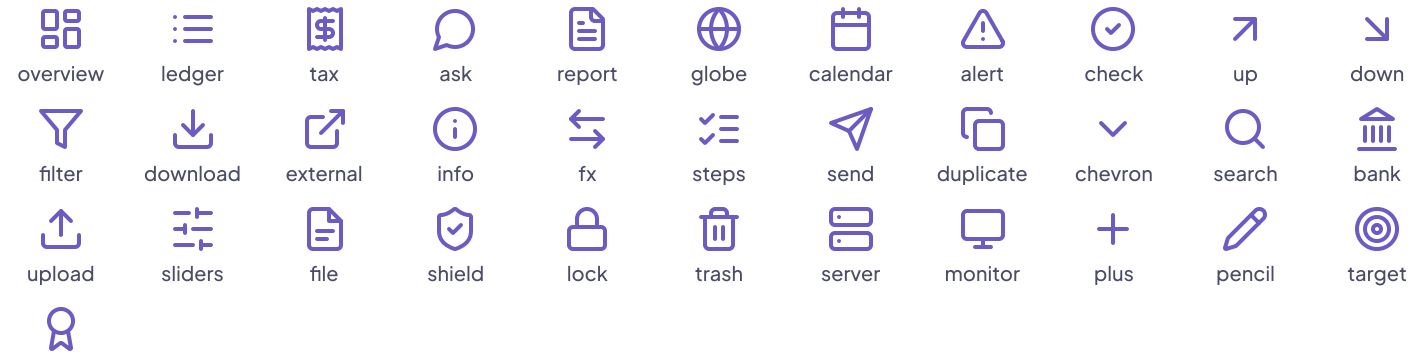

PRINCIPLE	RULES
One bold field per screen	Exactly one `.sa-hero`, always forest. Everything else is white, sage or a light tint.
Money is calm	Money figures are ink or forest on white/sage, tabular, right-aligned in tables. A deduction may use its semantic text colour. The only figure on a colour field is the hero figure: white, ≥48px, on forest.
Lime is a shape, not a text colour	Lime only for large shapes, bars, dots and the countdown numeral (≥48px). Never small text on lime; never small lime text.
Fees and tax never share a colour	Platform fee = clay, payout fee = stone, FX = slate, tax withheld = tax blue, net = forest.
Stop, don't guess	Missing data shows a light warning card beside the forest hero, names the record and offers one action. Totals that skip a record are marked incomplete and say what they leave out.
Pills and big radii	Buttons, chips and segmented controls are full pills. Cards 24px, inner panels 16px, inputs 14px, badges 8px.

1 · Logo and icons

The mark is a globe — one meridian, one parallel — in lime on a forest rounded square (radius 18/64). The lockup sets "Side Atlas" in Plus Jakarta Sans 800 (v1.2: no Chinese name; the mark is now the pigeon-head app icon, see the decision log). Don't recolour the mark, don't put the lockup on lime, don't use the wordmark without the mark under 120px wide.

Icons · 34, adapted from Lucide (ISC), 24px grid, 2px stroke, currentColor, no emoji (v1.3 added shield, lock, trash, server, monitor; v1.4 plus, pencil, target, award)

2 · Core tokens

forest #1F4B2C
Primary: buttons, active nav, net, hero

forest-700 #163A21
Pressed / hover

forest-100 #DCE8DD
Selected fill, net tint

lime #C5E35A
The one bright accent — shapes only

page #F6F4EC
Warm off-white page

sage #E7EDDF
Secondary surface, table head

surface #FFFFFF
Cards

line #E1E3D6
Hairlines (strong: #C9CDBD)

ink #18211B
Text and money figures

text-mid #4A574D

meta #7B867D
Captions

warn #8C1D2C
Stopped / missing data

Typography · Plus Jakarta Sans (OFL), substitute for Linktree's Link Sans; tabular figures verified

STYLE	SPEC	USE
$5,341.79	800 · 56/56 · −0.03em	Hero figure
Tax items	800 · 32/37 · −0.02em	Page title
Where the gross went	800 · 22/28	Card title
Tax already withheld	700 · 17/23	Sub-heading
Body text	500 · 15/22	Paragraphs, nav
Small text	500 · 13/19	Notes, meta
LABEL	700 · 12 · uppercase · +0.06em	Card labels, table heads

Buttons

All buttons are full pills, 44px (small 34px). Pressed: sinks 1px and darkens to forest-700. On a colour field use white with the field's colour as text, or a white outline.

Radii

Card 24 · inner panel 16 · input 14 · badge 8 · button, chip, segmented control: pill. Shadows: cards almost flat (`0 1px 2px`), floating sheets `0 12px 32px` at 10%.

3 · Palette

Where the money went (fill · tint · text on white)

Net / landed #6B5BC2			Text on white
Platform fee #B65A34			Text on white
Payout & payment fees #9A8E78			Text on white
Currency conversion #5D7685			Text on white
Tax withheld #2F59C9			Text on white
Missing data / stop #8C1D2C			Text on white
Success #6B5BC2			Text on white

Platforms — ours, not the platforms' brand colours

Bilibili #1F8A84			Text on white
YouTube #D2465A			Text on white
Twitch #3F9BD9			Text on white
Patreon #B4549A			Text on white
Upwork #5D8E2E			Text on white
Fiverr #D9A514			Text on white
Freelancer.com #4D5A66			Text on white
Contra #8B5A3C			Text on white

Platform colours appear only as dots, chips and the share-of-net bar. Deduction colours appear only in waterfalls, gap bars and deduction columns. The two sets never meet in one chart.

4 · Components

PART	SPEC
Hero field	`.sa-hero` forest, radius 24, padding 30/32, min-height 236. Lead 16/600 in on-forest-mid, figure 56/800 white, sub 14/500. Lime orb bottom-right, clipped, never behind text. One per screen.
KPI card	White card, label (icon 16 + uppercase label), figure 34/800 (ink or forest), note 13 text-mid, optional delta pill (ok tint / warn tint).
Waterfall bar	22px pill track (sage), segments with 2px gaps: net forest, platform fee clay, payout stone, tax withheld tax blue. Legend rows: 12px swatch · label · amount (tabular, right) · % of gross. Net row bold forest.
Platform chip	Pill 32px, white, 1px strong line, 9px platform dot, 13/600. Selected: forest-100 fill, forest border and text.
Ledger row	Dense table, 13px, 10/11 padding, hairlines. Date MM/DD · platform dot + name · type with ref below in mono · original amount; non-USD shows `÷ 7.1800 · 2026-09-03` (rate and its date) in slate mono below · gross · fee (clay) · payout (stone) · withheld (tax blue, bold) · net (forest, bold). Zero shows an em dash in line-strong.
Tax item card	White card; country badge in tax tint; amount 28/800 tax-text, native currency below; sage info note under it.
Form vs bank row	Platform · form badge (sage; "No US form" in tax tint for Bilibili) · paid out to (PayPal bold) · form view (gross) · bank view (landed, forest bold) · 120px gap bar (clay/stone/tax/line for refunds) + gap amount · transactions · status: below 1099-K threshold / 1099-MISC likely / projected (sage), possible duplicate (warn), CN tax record (tax). Total row for platforms with US forms. Above the table: sage threshold banner; below: simulated-forms note, duplicate (warn) and contrast (sage) notes.
Missing-data warning card (v1.1)	`.sa-warncard`: warn-tint fill, 1px hairline, 4px maroon left rule, radius 24. "Calculation stopped" label (12/700 uppercase, maroon, alert icon), title 21/800 ink, body 14.5 text-mid, white key-value panel (platform, reference, amount, date, rate = missing), primary "Add the rate" + secondary "Open record", PRISM chip. The hero stays forest and shows the partial total with an "Incomplete" glass chip.
Source card (v1.1)	`.sa-src` white card radius 24, platform dot + name 16/800, status badge (ok "Connected" / sage "Not connected", dashed border), file name mono, detected format 12.5 meta, footer: records · date range · payout target.
Upload zone (v1.1)	`.sa-drop`: sage fill, 2px dashed line-strong border, radius 24, white icon tile, h2, one sentence, primary "Choose CSV files".

Rate control (v1.1)	Number input (radius 14), preset segmented pills 15–35%, range slider (accent forest), sage note "you choose; Side Atlas doesn't suggest a rate". Preview updates the hero figure live. Platform include/exclude: `.sa-toggle` pill switch, forest when on.
Agent step timeline	Numbered 32px nodes on a 2px rail; tool name mono 13.5/700 · args in meta; one-line result below; check icon at right. Final step filled forest. Answer figures carry step references (`.sa-ref`).
Data switch (v1.3)	`.sa-mode` : two-option pill switch under the logo, sage track, selected option white with forest text and a card shadow. "Your data" carries the lock icon. Switching changes every screen's data; the four nav items stay.
Utility links (v1.3)	`.sa-util` in the sidebar foot above the tagline: My data (with a file count once imported) and Settings & privacy. 36px pills, 14/600, selected forest-100. They are not nav items.
Upload hero (v1.3)	`.sa-hero.drop` : the screen's one hero doubles as the drop zone, with a 2px dashed inner rule (on-forest ghost line) inset 12px. Title 34/800, one sentence, white "Choose CSV files" and an outline "Explore demo data", one hint line. Atlas waves bottom-right with one speech bubble (`.sa-speech` , empty states only).
Privacy promise strip (v1.3)	`.sa-promise` : one white card split in three (browser · server · AI), 40px forest-100 icon tile, a short sentence 14/700 and one meta line. Same words wherever it appears.
Where-to-download grid (v1.3)	`.sa-where` : 4 × 2 inner panels; platform dot + name 14/800, menu path 12.5 text-mid, file name in mono meta. "Paths may change" in the card head.
Upload list (v1.3)	`.sa-table.sa-files` : platform dot + name + pseudonymised account (`acct ••NNNN` , four digits since v1.3.1, mono meta; the real ID is never shown) · file (mono) · rows · dates ("Jul 1 to Sep 30") · currency · issues (ok "None" / warn "N need a rate") · Remove (`.sa-linkbtn` with trash icon, warn tint on hover). A file that was not read is a warn-tint row with the reason.
Settings sheet (v1.3)	`.sa-settings` : rows of label (icon 16 + 16/800) and control on one line, help text 13 text-mid below, hairline between rows. Controls are segmented pills and the rate input.
Currency switch (v1.3)	`.sa-seg.cur` : segmented pill with a glyph per option ($ USD · ¥ CNY), sits left of the period switch on Overview. Changes display only; the ledger keeps each record in its own currency.
Privacy center map (v1.3)	`.sa-datamap` on the hero: one glass row per destination (This browser · Side Atlas server · Ask Atlas · PRISM traces), 36px icon tile, name 14/700, what it holds 13 on-forest-mid.
Danger button (v1.3)	`.sa-btn.danger` : white pill, warn text, warn line; hover warn tint. Delete actions only; never filled. Delete asks once, offers "Export backup" first, then clears this browser.

Grouped table rows (v1.3)	`tr.group`: page-colour band, uppercase label, one badge (tax "Withheld at withdrawal" / warn "No Chinese tax withheld"). Zero withholding shows ¥0.00 in line-strong.
Empty-state card (v1.3.1)	`.sa-emptycard`: white card, Atlas thinking at the inline mascot size, title 18/800 "Upload your first statement", one sentence for the screen, primary small "Go to My data". One per screen in Your data mode before any import; no hero, no skeletons. The four sentences are below.
Two-countdown hero (v1.3.1)	`.sa-counts` on the Tax hero when the tax home is Both: each countdown has an uppercase country tag, the 72px day count in the accent, two lines of label and a glass date chip; a glass hairline divides them. The set-aside figure stays on the left.
Facts row (v1.3.1)	`.sa-facts`: one country section as four label / value / note cells in an inner panel; the section head carries a country badge (US sim, China tax) and one secondary link.
Rate line (v1.3.1)	`.sa-table td .rate` under every converted amount, slate mono 11.5, source in the body font, bold. No rate file: `× 6.7206 · Aug 21 · ECB reference rate`, and on a weekend or holiday `× 6.7206 · ECB rate of Fri Aug 21`. With your rate file: `× 7.1641 · Aug 21 · Your rate file`. A date your file lacks: warn-tint row, warn badge "rate missing", the line `Your rate file has no rate for this date`, money cells "left out of totals", KPI net "incomplete" and a stop card above the table naming the record.
Confirmation dialog (v1.3.1)	`.sa-dialog` over a scrim, 580px, radius 24: warn icon tile, title 24/800, one paragraph, a list of what goes (statements, records, settings), then filled danger "Delete all my data", secondary "Export backup first", ghost "Cancel" on the right. Used for delete only.
Filled danger button (v1.3.1)	`.sa-btn.danger.solid`: warn fill, white text. Only as the confirm action inside the dialog; everywhere else the danger button stays white.
Entry sheet (v1.4)	`.sa-drawer` from the right, 480px on the page colour: title, one sentence, Close. A full-width `.sa-seg.wide` Income | Expense toggle, then date and currency side by side, a 60px amount field with the currency sign, then **Source** (income: free text plus chips of your sources and "New source") or **Category** (expense: seven chips, one picked), and an optional note with a lock line saying notes stay in this browser. Primary "Add income" / "Add expense", ghost Cancel. The goal sheet uses the same frame.
Form field (v1.4)	`.sa-field`: 11px uppercase label, 48px control (radius 14, 1.5px strong line; focus forest with a forest-100 ring), help line in meta. Big variant 60px / 26px 800 for amounts; area variant 76px for notes.
Filter chips with counts (v1.4)	Existing `.sa-chip` with a `.n` count: All · Income (up icon) · Expenses (down icon); one is on. Beside them, the "Added by you" tag with how many entries this month.

"Added by you" and dots (v1.4)	`.sa-you`: pink-100 badge, accent text, pencil icon. Platform dots stay filled in the platform colour; your own sources are hollow accent rings (`.sa-pdot.own`) and striped in share bars; expenses are dark squares (`.sa-pdot.exp`). Expense rows sit on the page colour and their amount is ink; expenses never use the fee, payout or tax colours.
Expenses by category + kept sum (v1.4)	`.sa-catbars`: one row per category with its amount and a 6px one-colour bar scaled to the largest. Under it `.sa-kept`: Net income, Your expenses, and **Kept after expenses** in forest, then one meta line explaining it.
Goal card (v1.4)	`.sa-goal`, three states: in progress (target icon, month, % badge, income "of $6,000", 12px progress bar, "You have {left} left…", Change goal); ended short (same, "You ended {left} short…"); reached (`.reached`: pink-100 card, reached date in the label, title, body, full bar, "You're {over} above…", Atlas celebrating at card size). Goal progress counts net income before your expenses.
Badge tile (v1.4)	`.sa-badgetile`: 96px pink-100 art panel with an Atlas pose, title 15.5/800, one-line description, then the reason in numbers and the earned date. Locked: sage panel, greyscale art at 45%, lock chip top right, "what's left" with a 6px progress bar. The latest earned tile has a 2px forest border.
Milestones grid (v1.4)	`.sa-badgegrid`: 4 columns, 16px gap, under a compact hero with "N of 8 earned", the latest badge and its pose at hero size.
Latest badge row (v1.4)	`.sa-latest` on Overview: pose at inline size, label with date, badge title, reason, "All" link to Milestones.
Sidebar / nav	248px white, hairline right. Lockup at top. Nav items 44px pills, icon 20 + 15/600; active forest fill white text; hover sage. Footer: tagline (forest 14/700), PRISM chip, disclaimer.

Goal card · the three states (v1.4)

SEPTEMBER GOAL · AS OF SEP 15

$2,729.80 of $6,000

$3,270.20 left to reach your $6,000 goal.

AUGUST GOAL · ENDED

$5,673.38 of $6,000

You ended $326.62 short of your $6,000 goal.

SEPTEMBER GOAL · REACHED

You reached your September goal

You're $118.33 above your $6,000 goal.

Empty-state card · the four sentences (Your data mode, before any import)

OVERVIEW

Upload your first statement

Once you upload statements, your overview will show your side income totals.

Go to My data

LEDGER

Upload your first statement

Once you upload statements, your ledger will show your gross income, fees and net.

Go to My data

TAX

Upload your first statement

Once you upload statements, you'll see tax withheld and a set-aside at your chosen rate.

Go to My data

ASK ATLAS

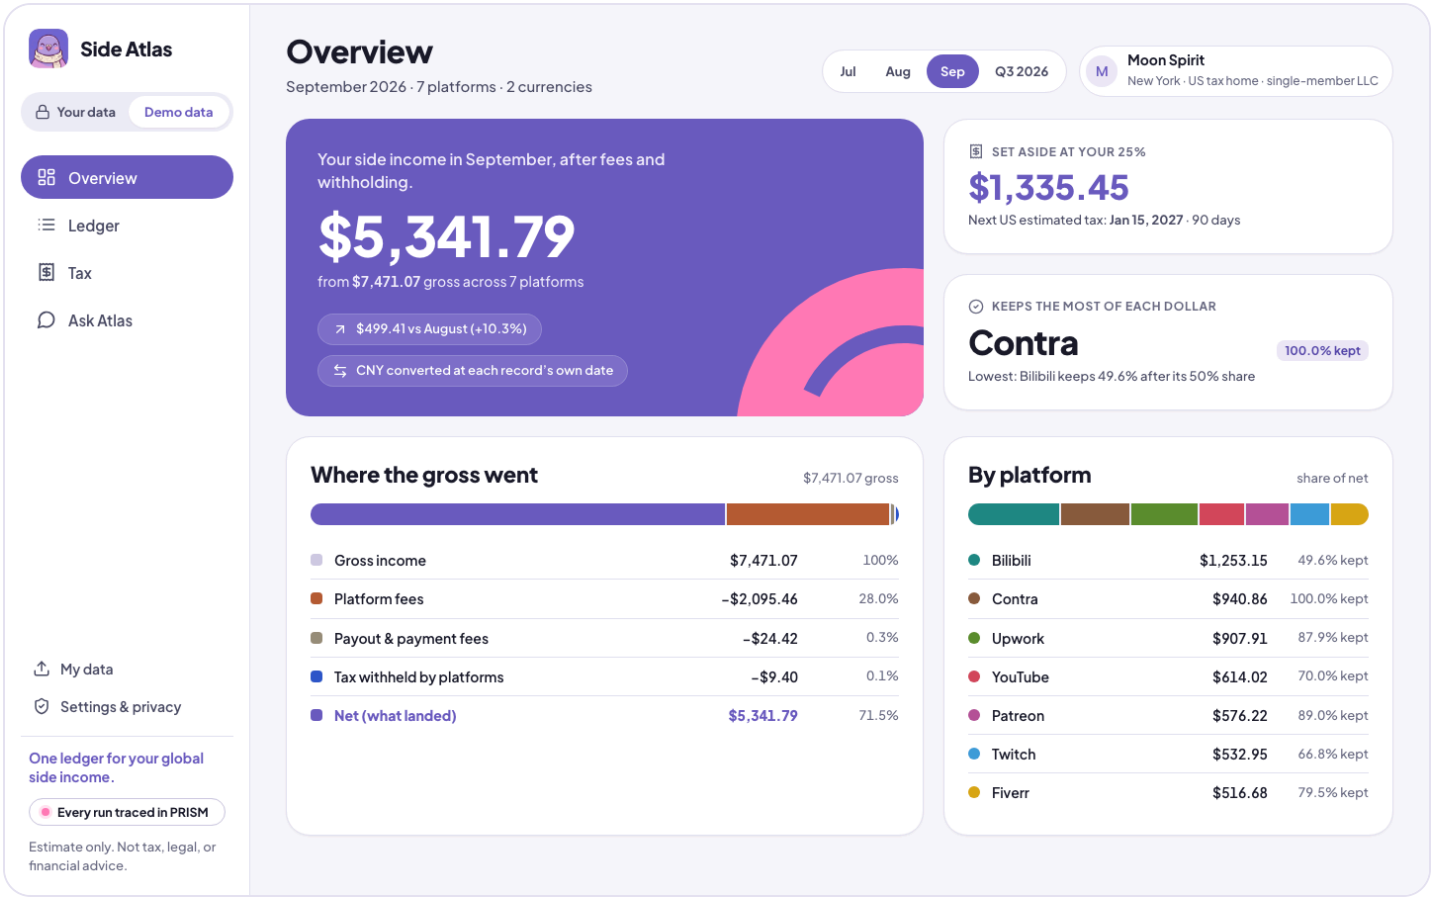

Upload your first statement

Once you upload statements, you can ask Atlas about your computed totals.

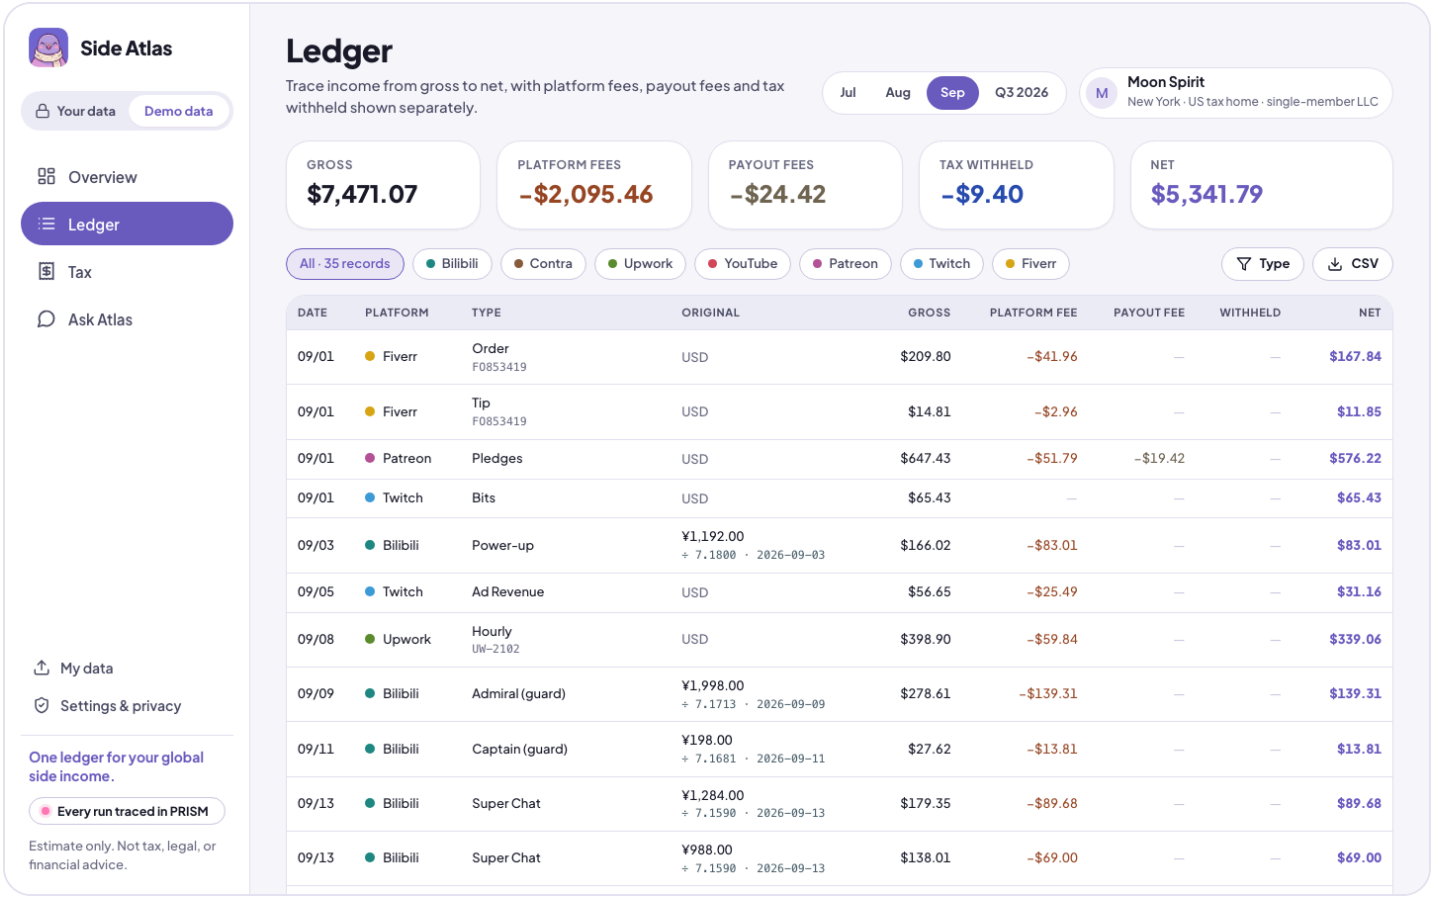

Go to My data

5 · Desktop screens (1440 × 900)

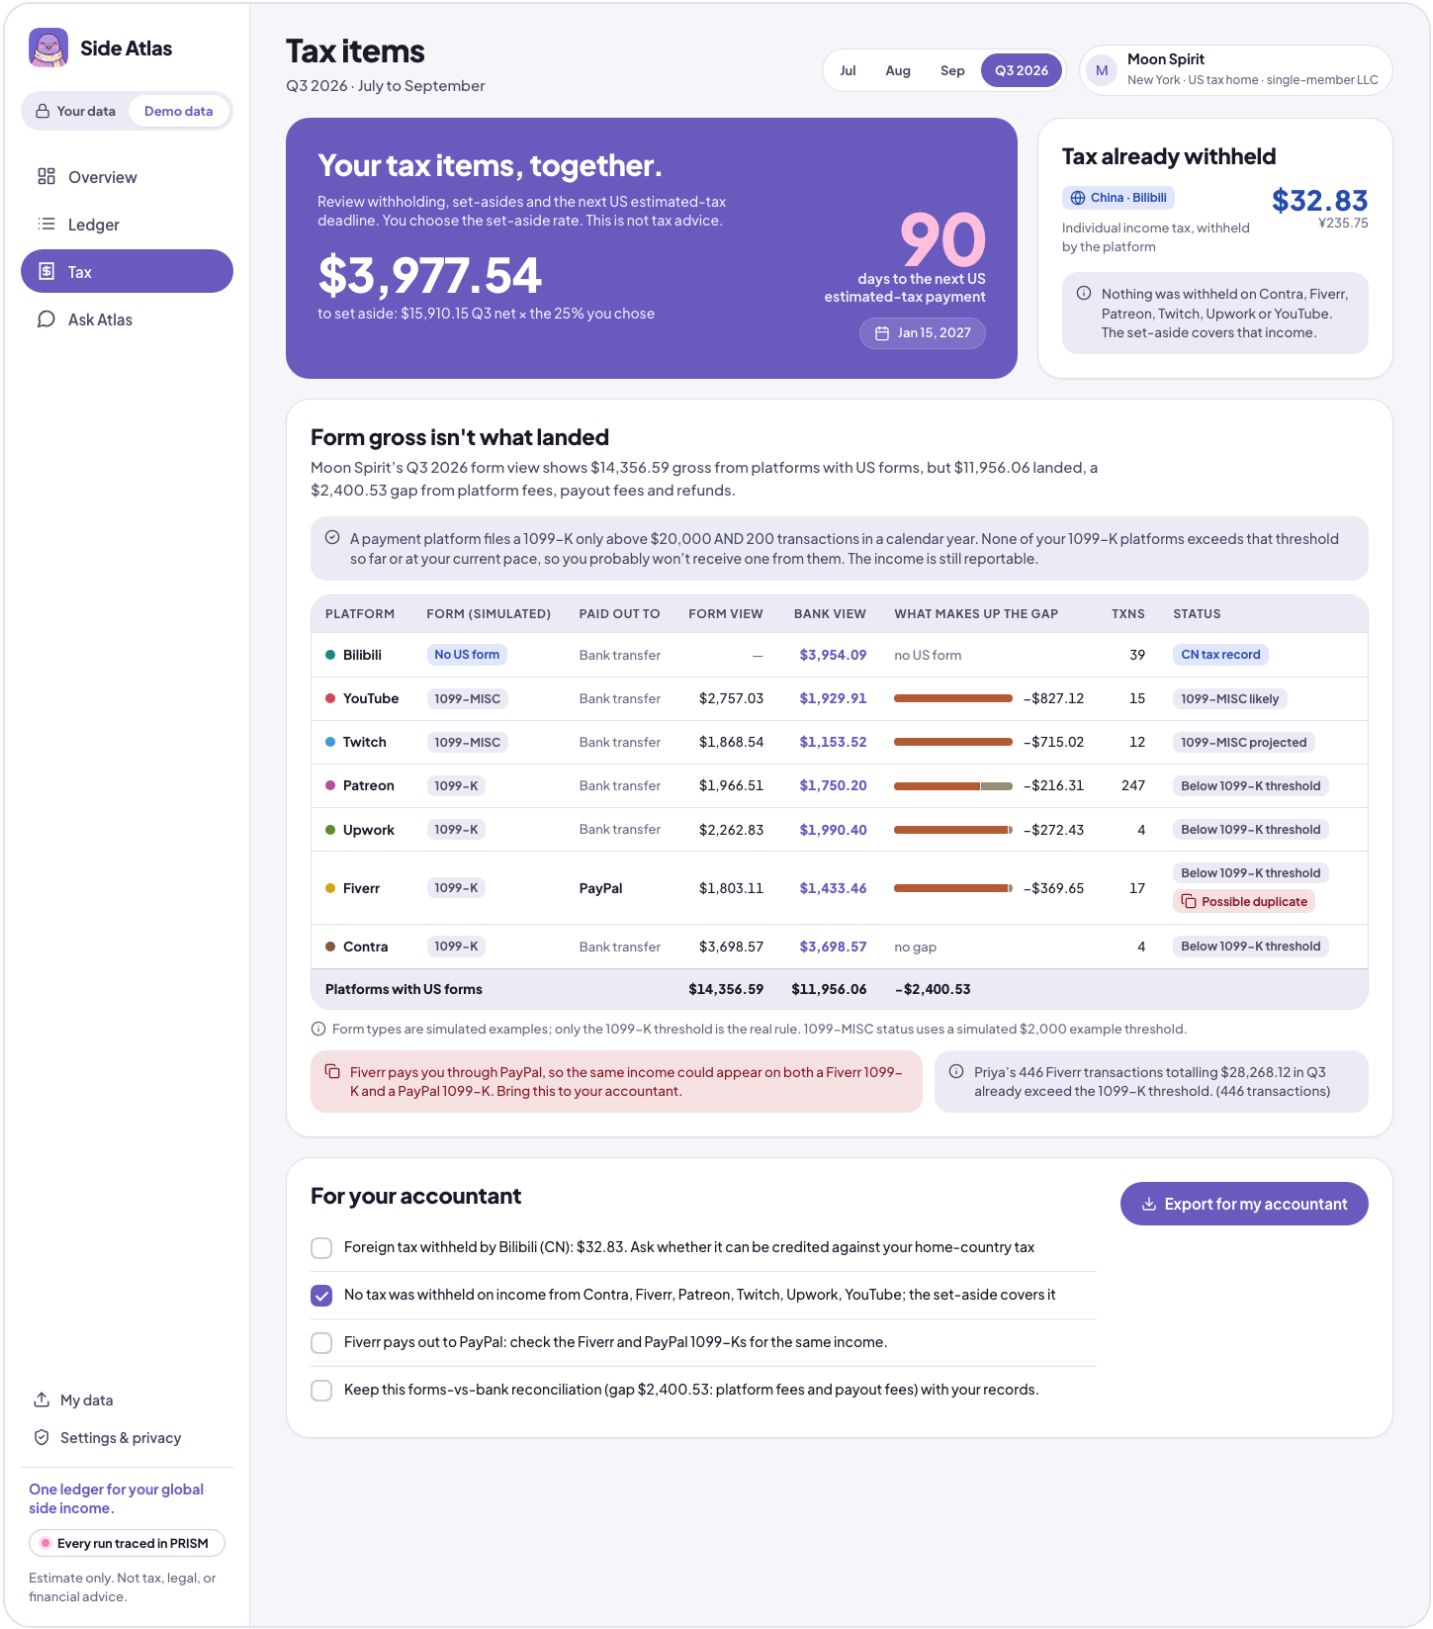

Screens 01 to 08 are the v1.1 drawings re-captured with the v1.3 shell in v1.3.1; for the v1.2 changes on those screens the built product (`web/_checks/`) is the reference.

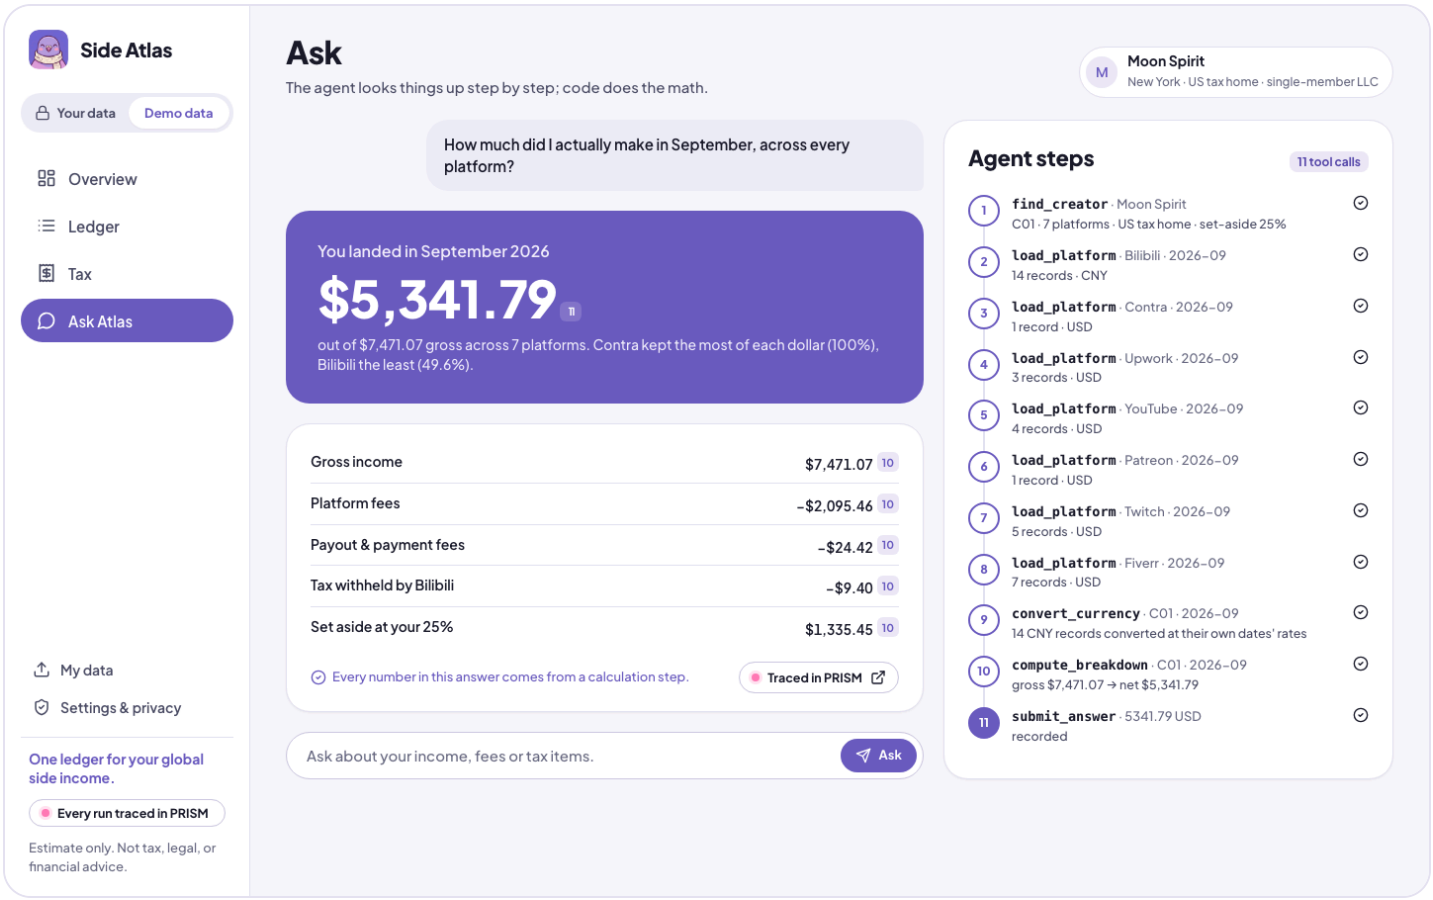

01 Overview. September net as the hero, set-aside and best keep-rate beside it; where the gross went; net by platform.

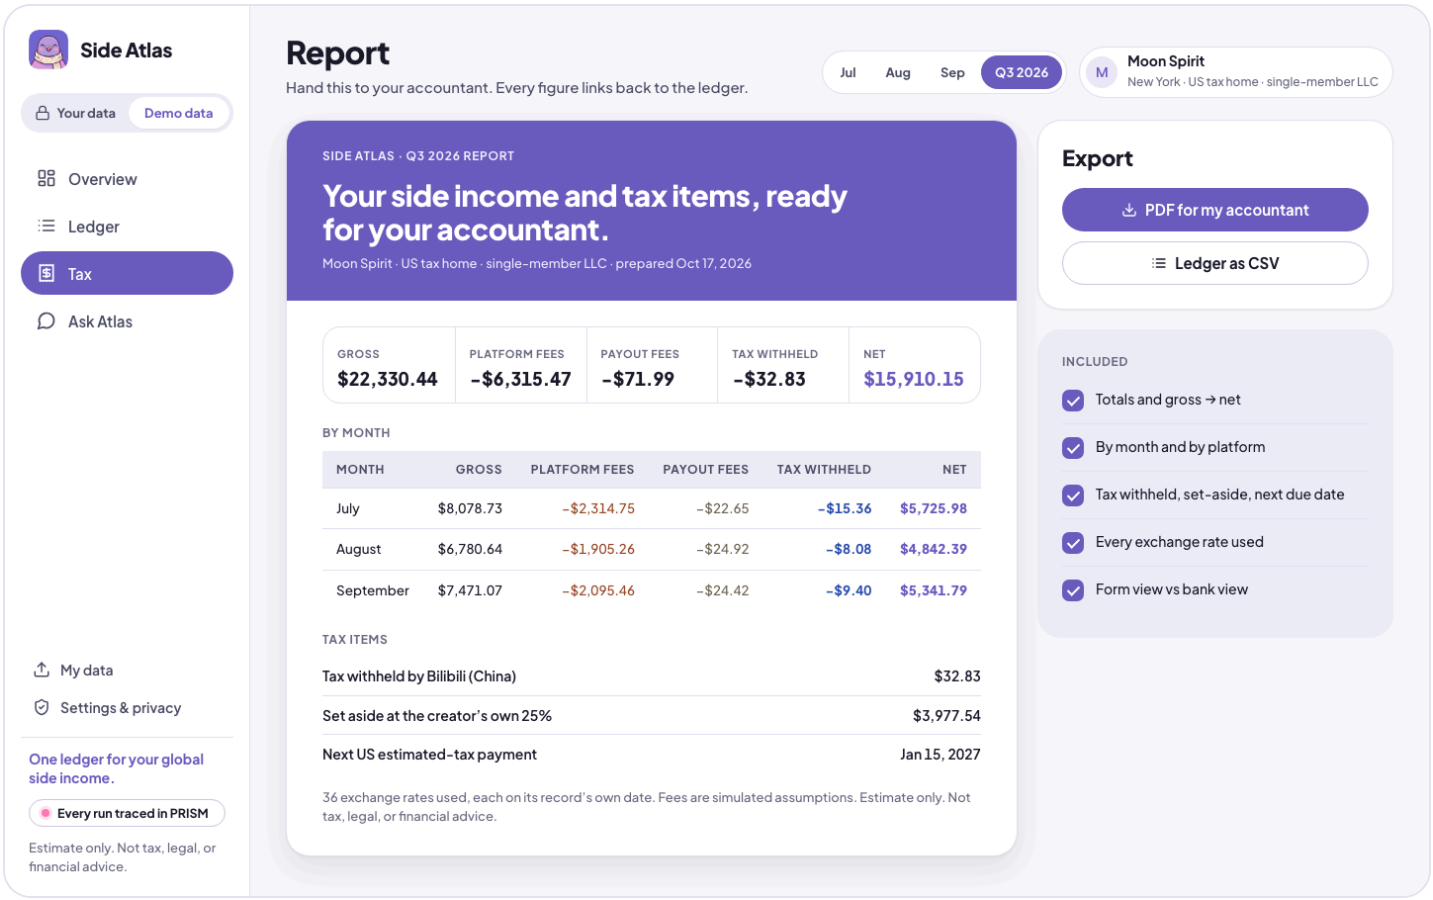

02 Ledger. Every record, with its own exchange rate and date; fees, payout fees and tax withheld in separate columns.

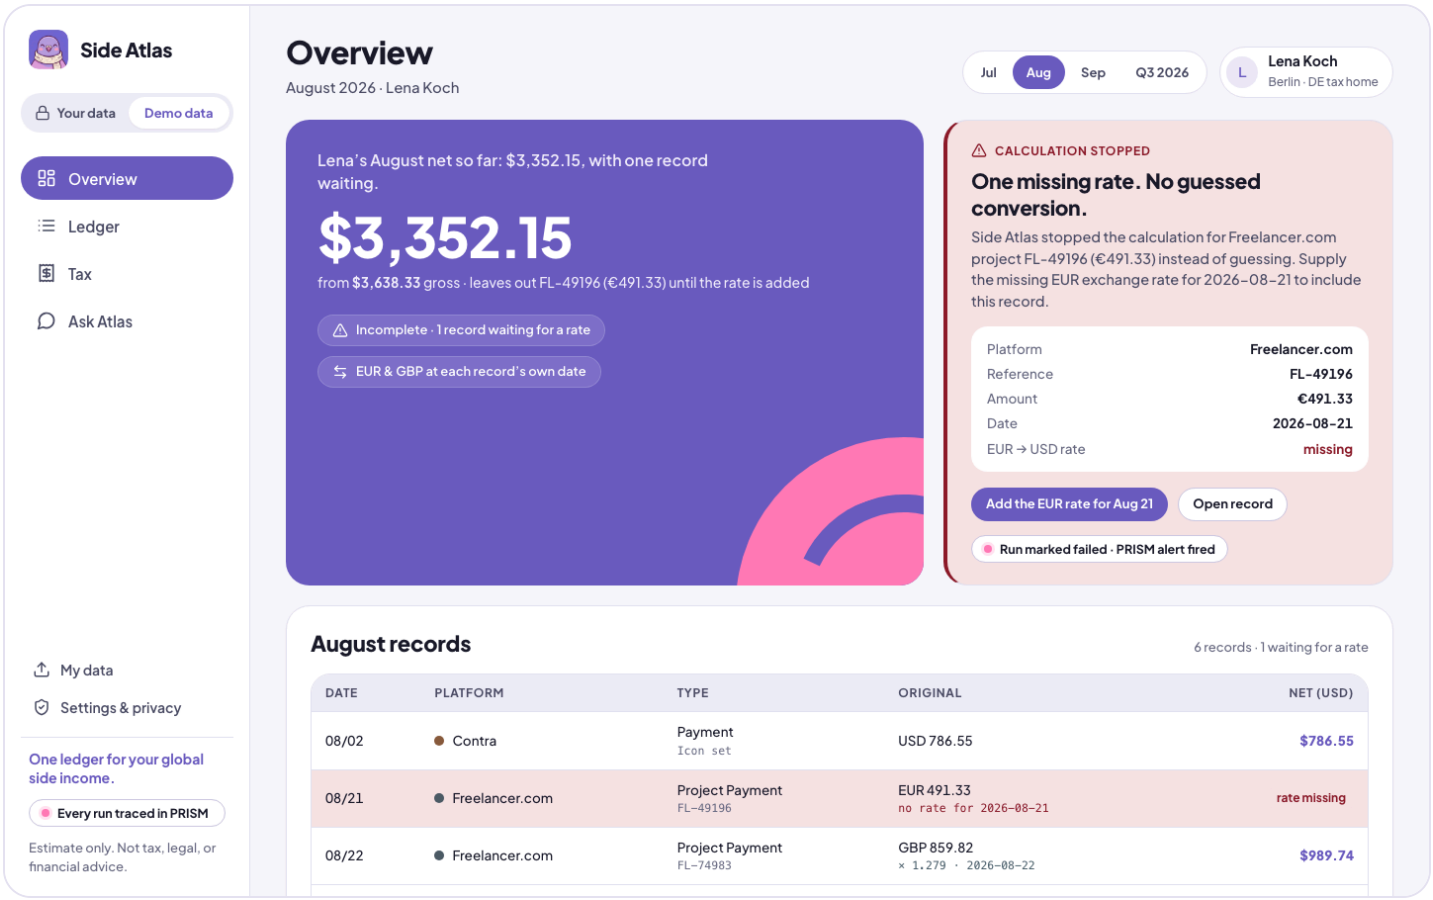

03 Tax items (hero). Set-aside at her own 25%, countdown to the next US estimated-tax date, tax withheld by country, form view vs bank view per platform with real numbers (Fiverr flagged as a possible PayPal double report; no 1099-K expected, income still reportable), accountant checklist and export.

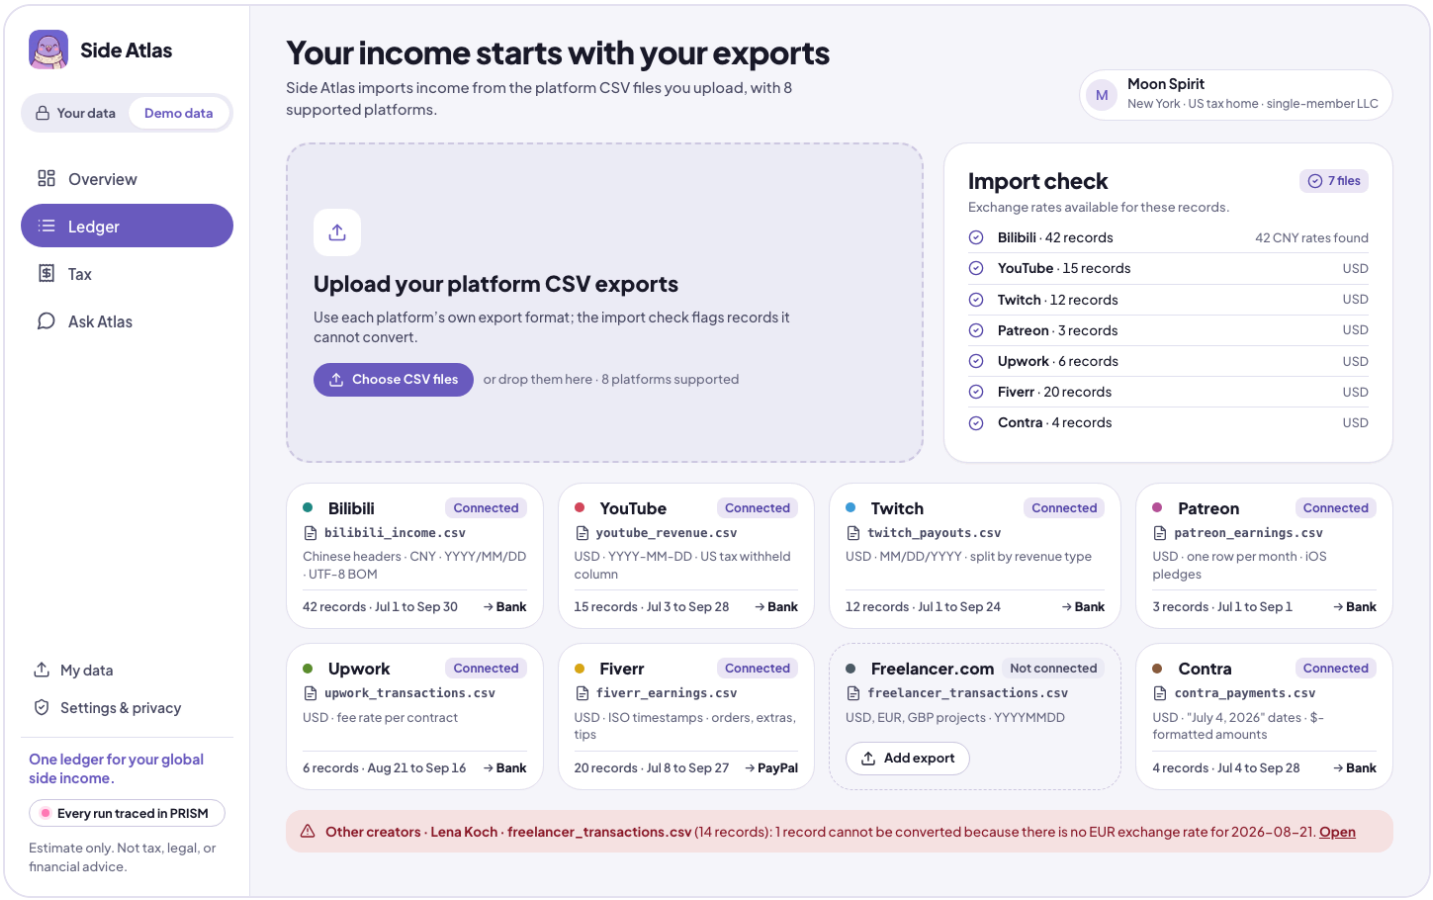

04 Ask. The answer with every figure tied to a step, the agent's 11 tool calls, traced in PRISM.

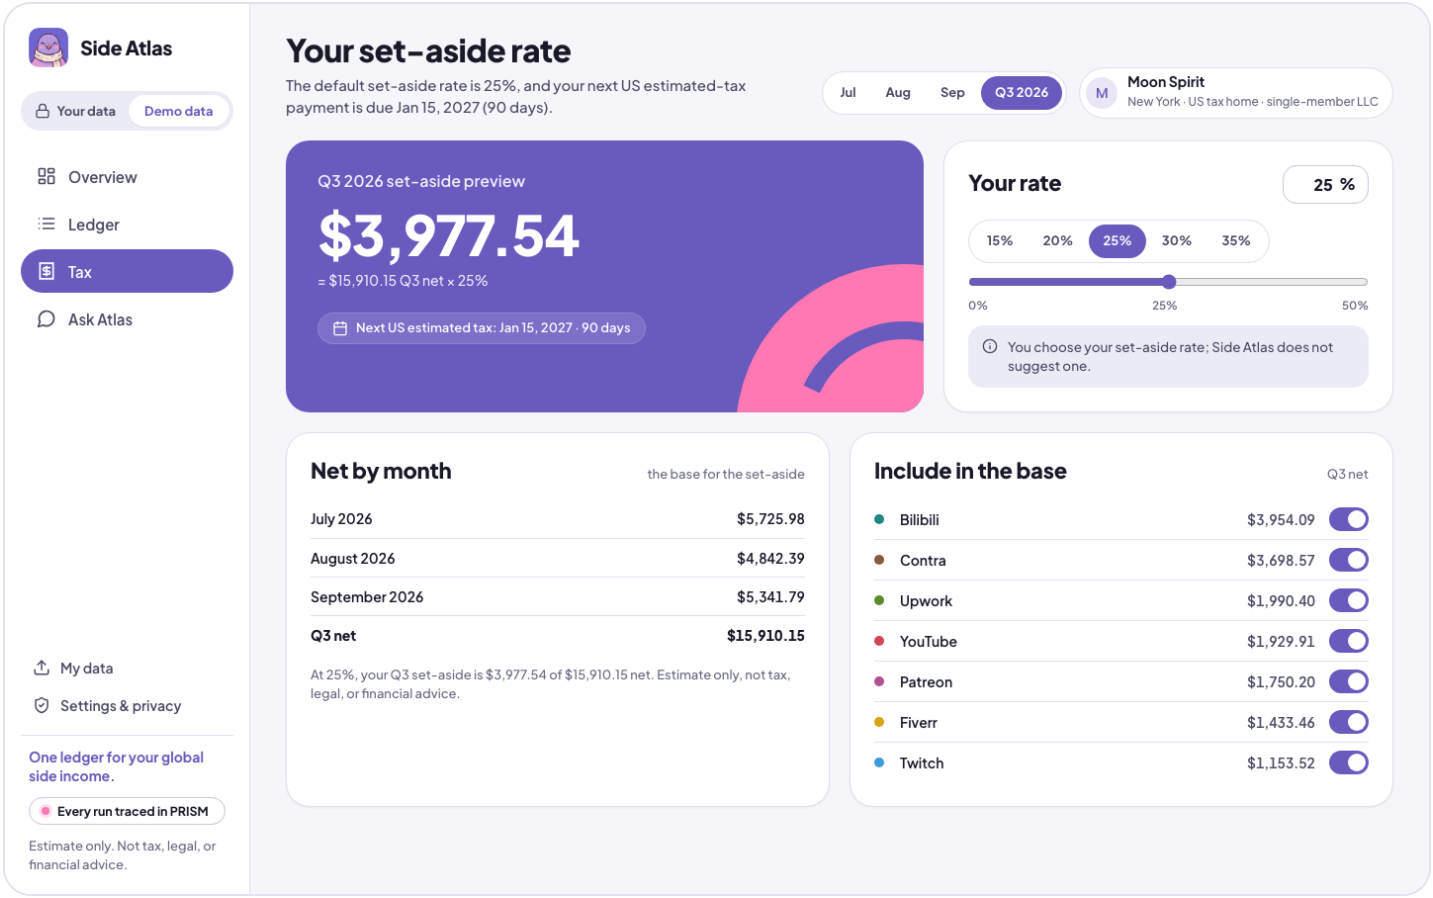

05 Report. The quarter on one sheet for the accountant; export as PDF or CSV.

06 Missing data. Lena Koch, August: the forest hero shows the partial net marked incomplete; a light warning card names the record (FL-49196, €491.33, no EUR rate for 2026-08-21) and asks for the rate. Nothing is estimated.

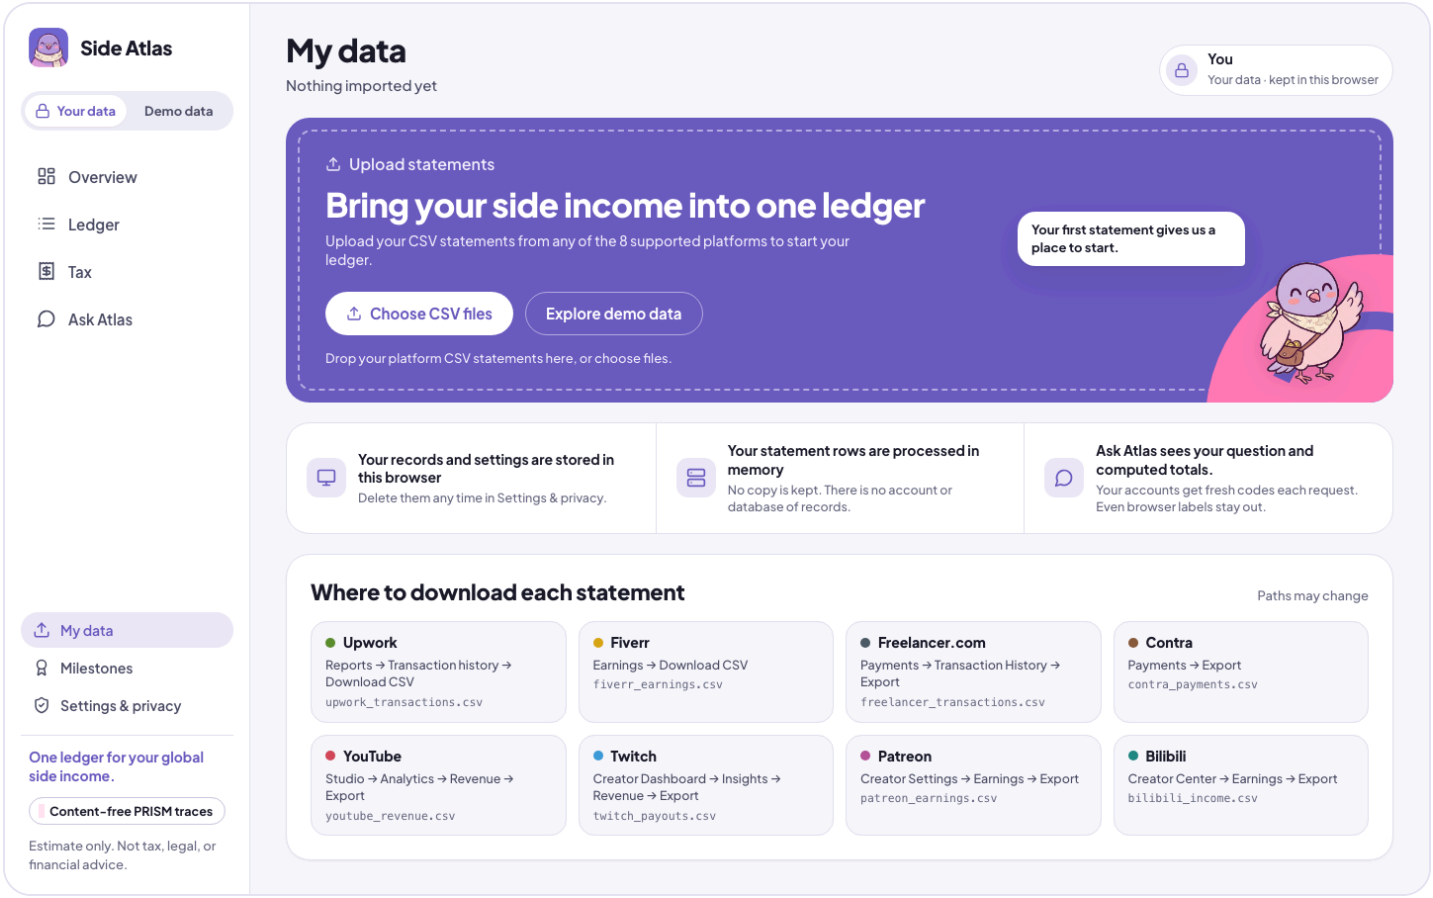

07 Sources. Upload zone, import check per file (Bilibili: 42 CNY rates found), the 8 platforms as cards with file, detected format, records, date range and payout target; Freelancer.com not connected; Lena's file flagged for the missing EUR rate.

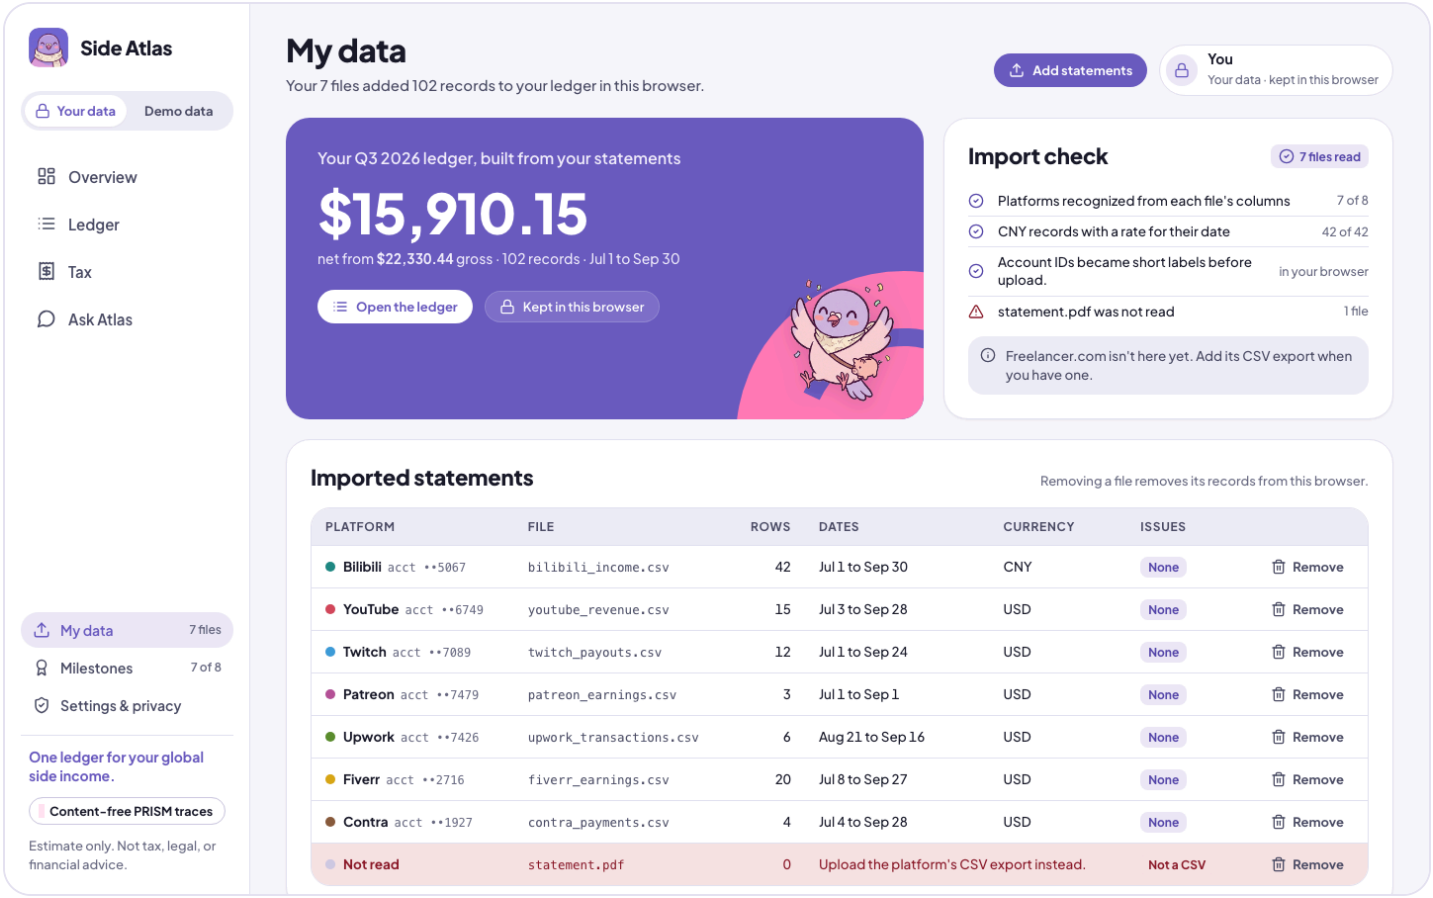

08 Set-aside. She chooses the rate (presets, slider or number); the Q3 preview ($15,910.15 × 25% = $3,977.54) and next due date update live; platforms can be left out of the base.

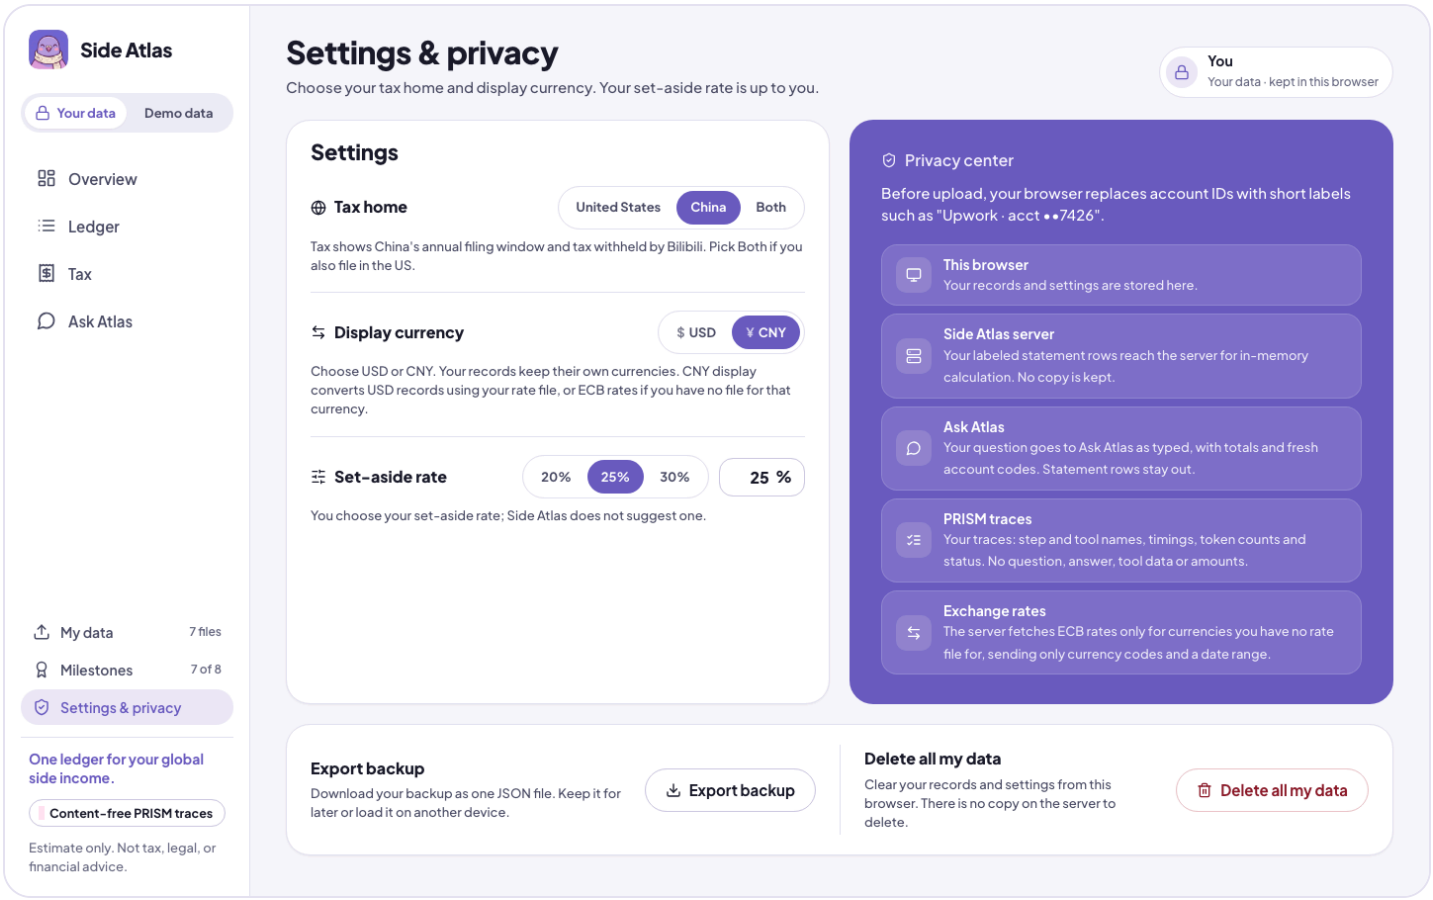

v1.3 · Your data. The person is "You": no name and no account. These screens reuse creator C01's exports as if uploaded, so every figure comes from `daoshou/ledger.py` (`07-mockups/gen_data_v13.py` → `data-v13.js`). The `statement.pdf` row on screen 11 is an illustrative state.

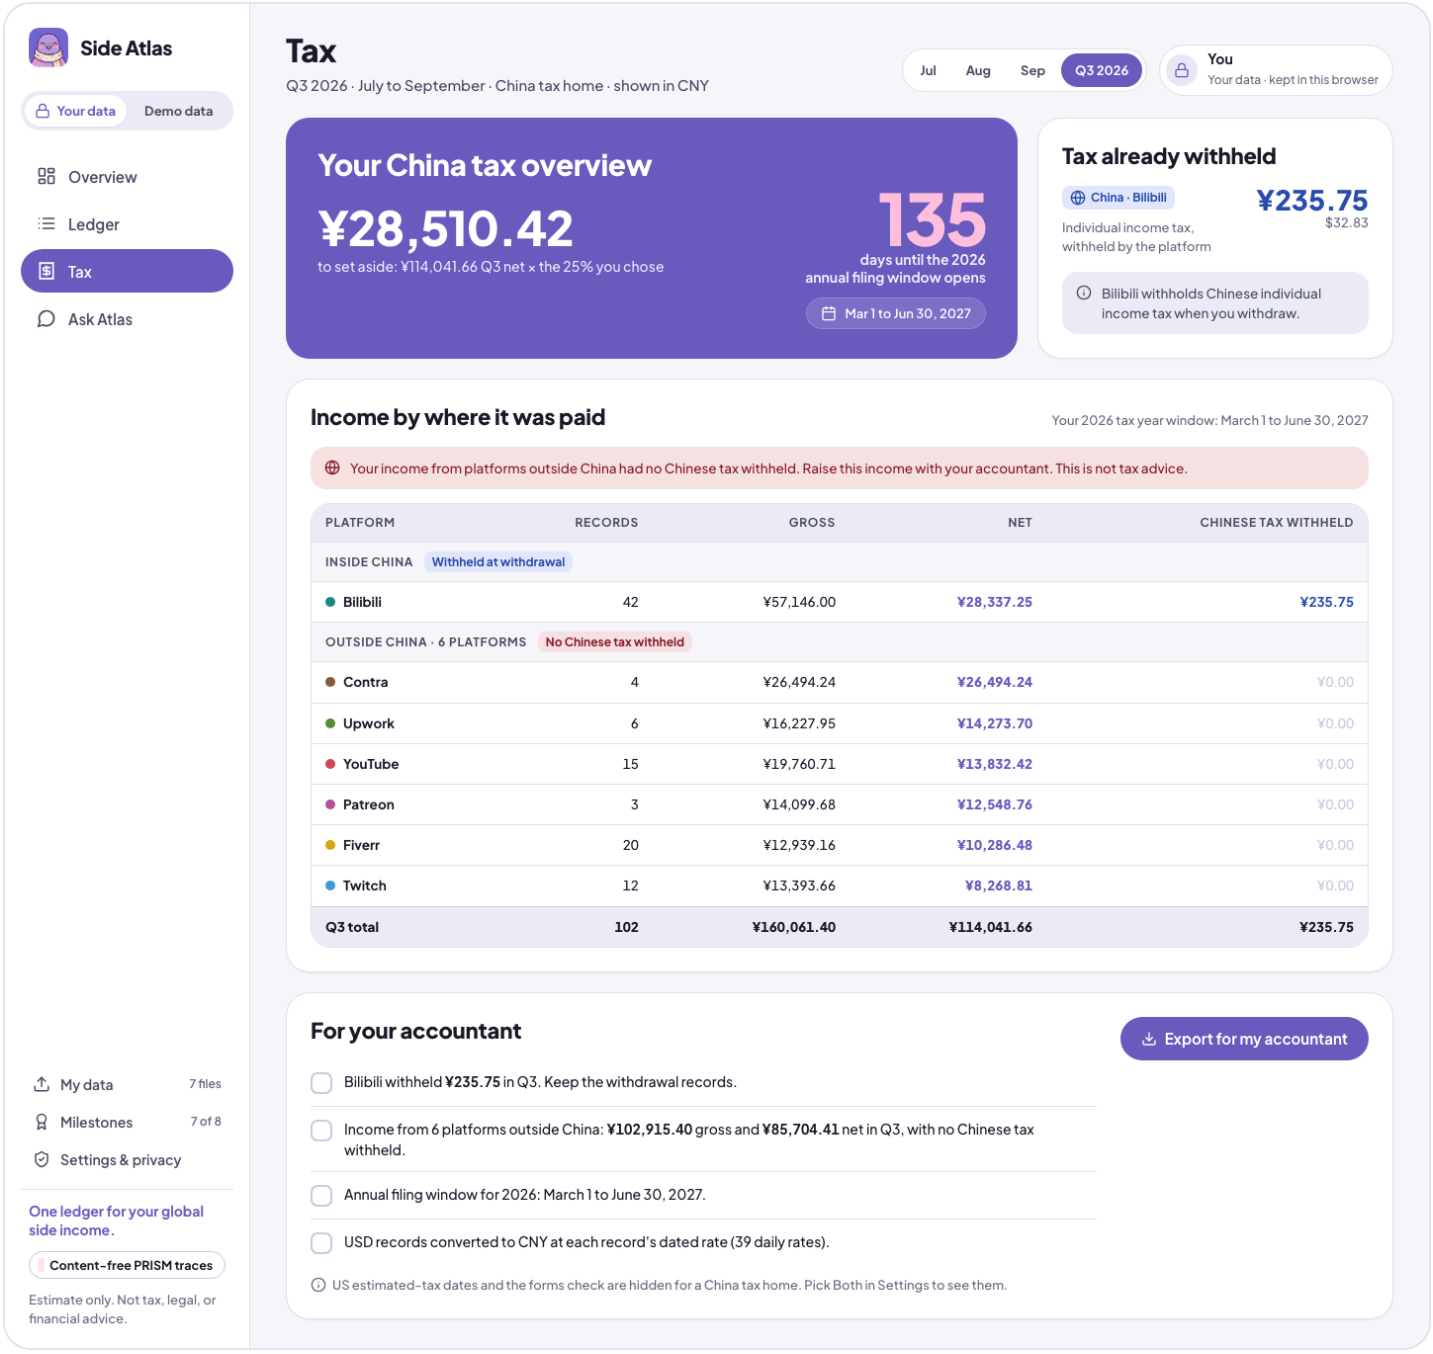

10 My data, empty. The hero is the drop zone: headline, one sentence, Choose CSV files or Explore demo data; Atlas waves with one line. Under it the privacy promise strip, then where each of the 8 platforms keeps its CSV export.

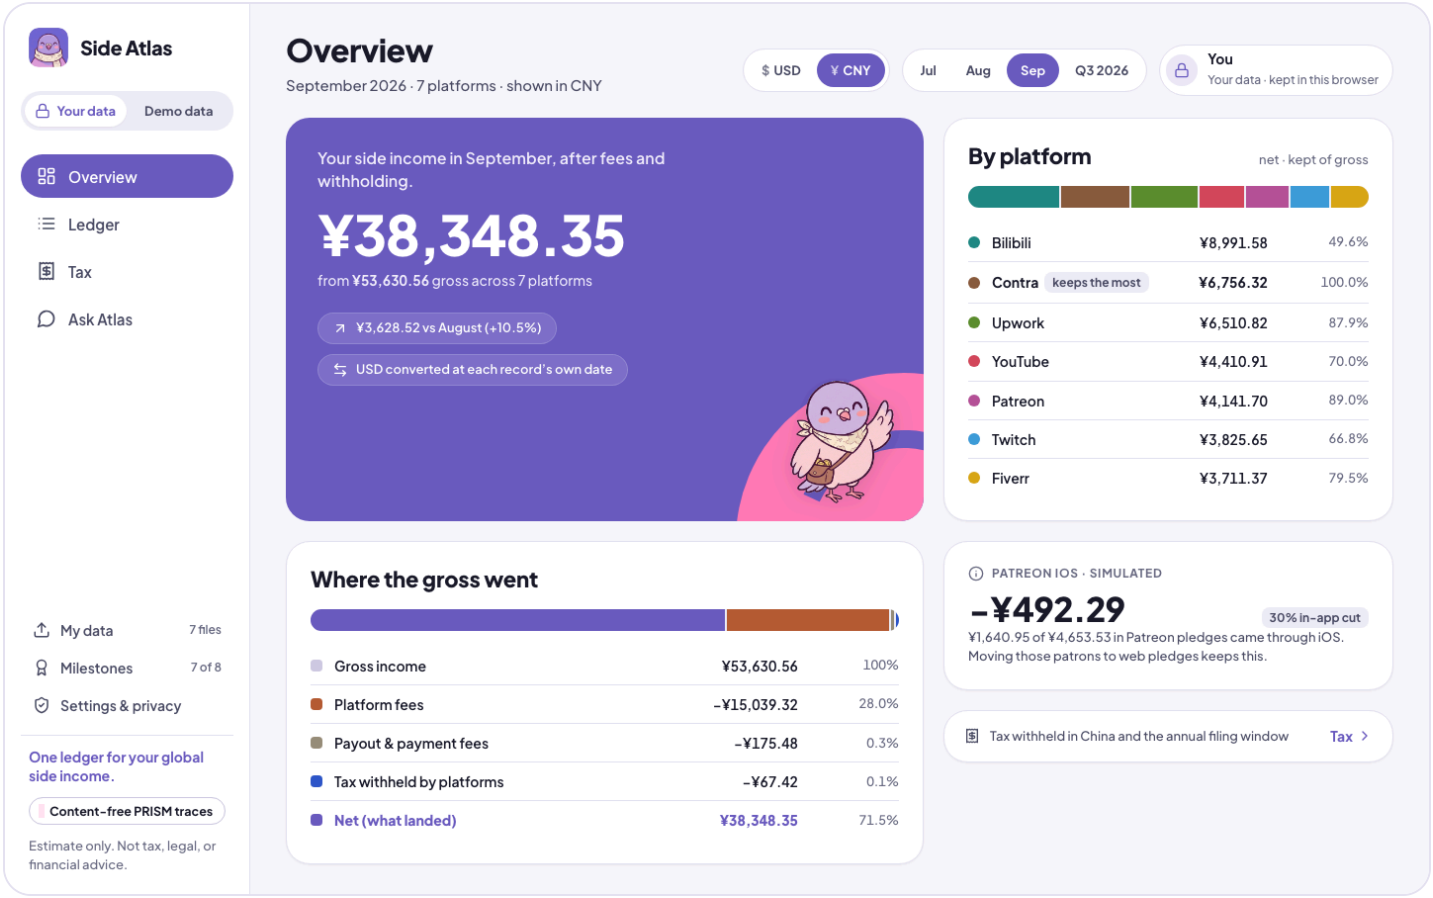

11 My data, after import. 7 files, 102 records: the hero shows the Q3 ledger they built ($15,910.15 net from $22,330.44 gross, Jul 1 to Sep 30) with Open the ledger; the import check (7 of 8 platforms, 42 of 42 CNY records with a rate, account IDs replaced in the browser, one PDF not read); one row per statement with its pseudonymised account, rows, dates, currency, issues and Remove.

12 Settings & privacy (v1.3.1: five privacy-center rows written against the build, the last one for exchange rates; display-currency help follows the rate rule). Tax home (US / China / Both), display currency (USD / CNY), set-aside rate (the person's own). The privacy center hero says where each kind of data goes; Export backup and Delete all my data (danger button) sit below.

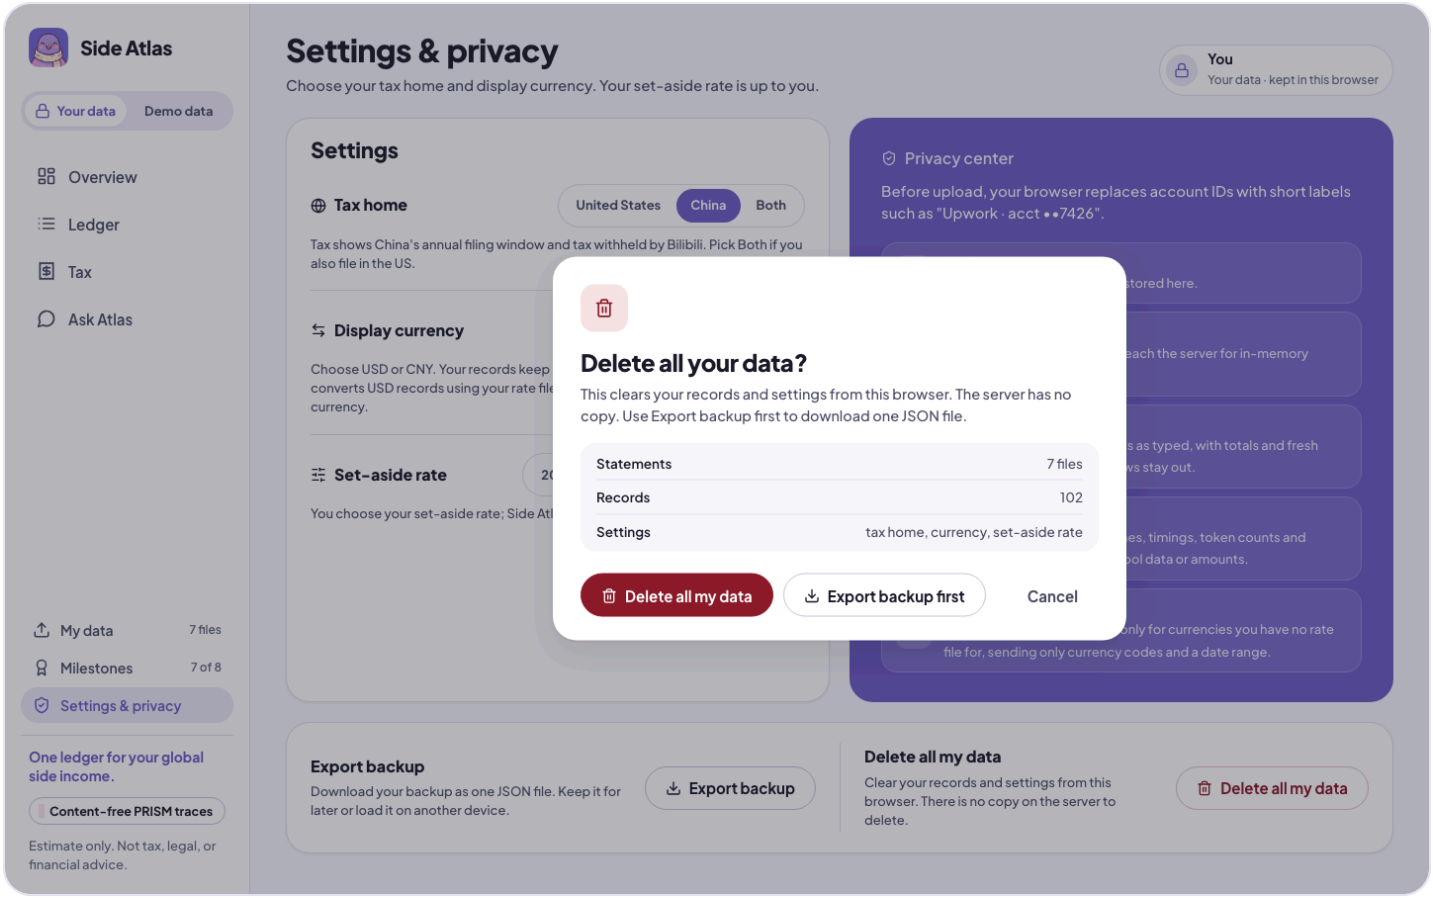

13 Tax, China tax home (full length). In CNY: ¥28,510.42 to set aside (¥114,041.66 Q3 net × the 25% you chose), 135 days until the 2026 annual filing window opens (Mar 1 to Jun 30, 2027), ¥235.75 withheld by Bilibili ($32.83), income grouped inside / outside China with the flag for ¥102,915.40 gross that had no Chinese tax withheld, and the accountant checklist. US estimated-tax dates and the forms check are hidden for this tax home.

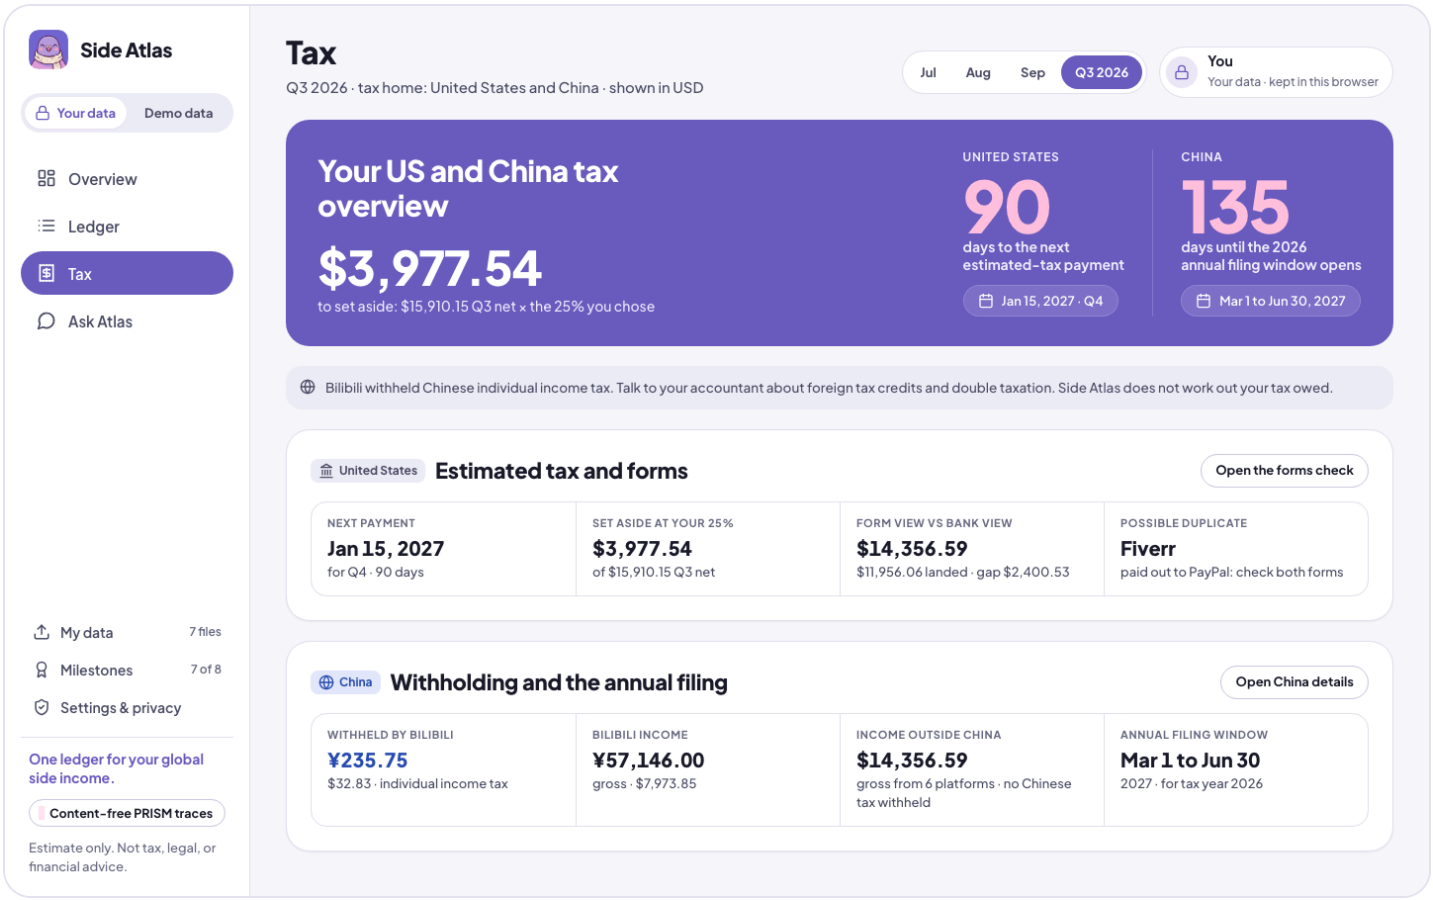

14 Overview in CNY (CNY rates from your rate file, the demo table with one rate per day). The v1.2 Overview with the currency switch on CNY: ¥38,348.35 net from ¥53,630.56 gross, +¥3,628.52 (+10.5%) vs August, USD converted at each record's own date; by platform, where the gross went and the Patreon iOS card in CNY. Totals are summed unrounded and rounded once, so platform rows can differ from a total by a cent.

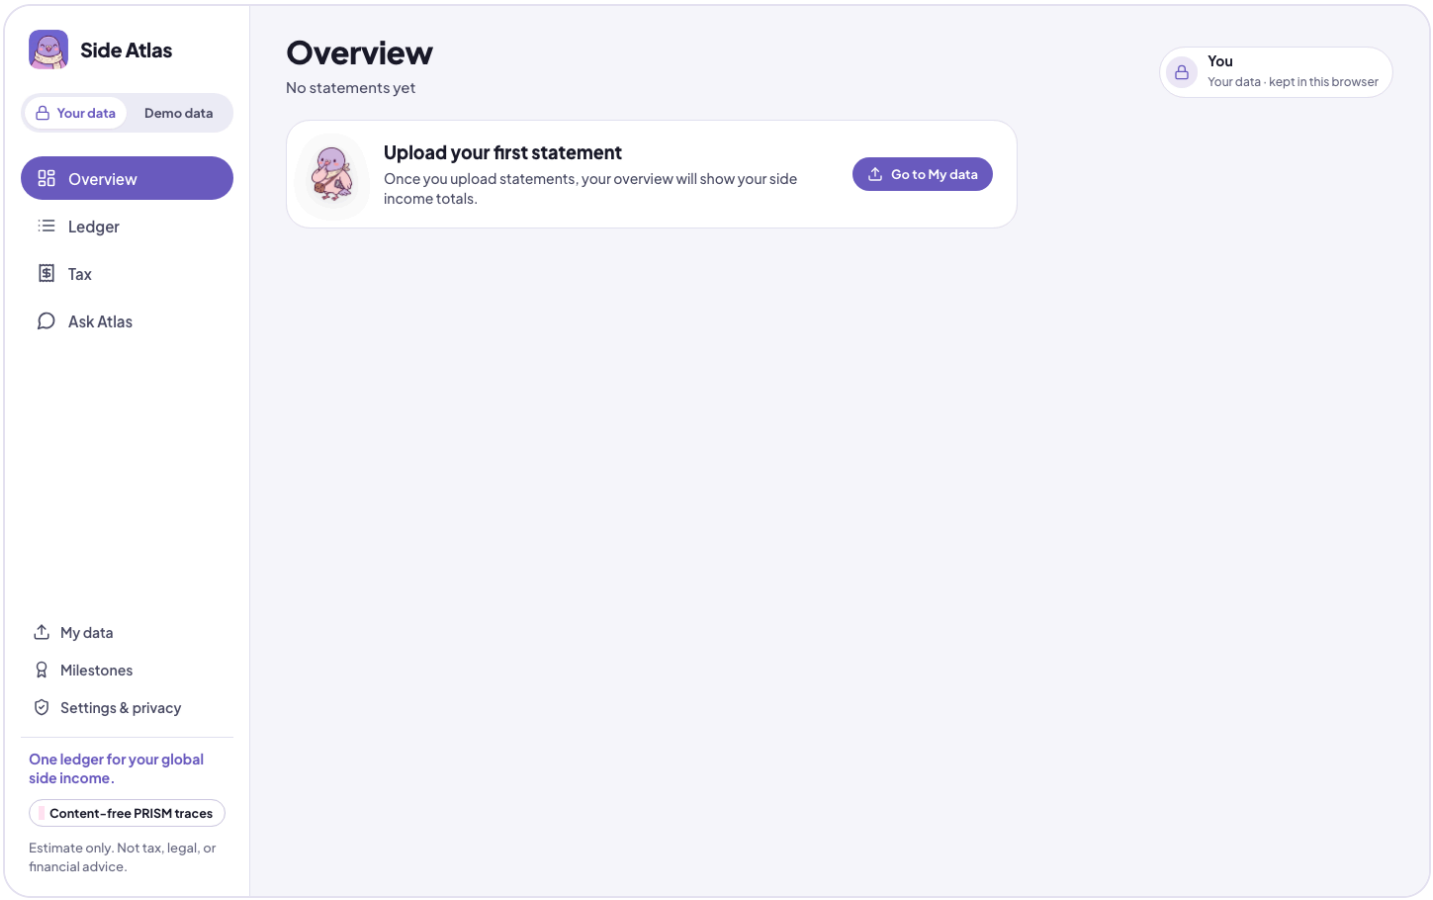

v1.3.1

12b Delete all, confirmation. Over Settings & privacy: what goes (7 files, 102 records, settings), filled danger "Delete all my data", "Export backup first", "Cancel".

15 Tax, tax home Both (shown in USD). Hero: $3,977.54 to set aside, 90 days to the US estimated-tax payment of Jan 15, 2027 (Q4) and 135 days until China's 2026 filing window opens. An information flag sends foreign tax credits and double taxation to the accountant and states no tax owed. United States section (next payment, set-aside, form view $14,356.59 vs $11,956.06 landed, Fiverr possible duplicate) above the China section (¥235.75 withheld by Bilibili, ¥57,146.00 Bilibili gross, $14,356.59 gross outside China with no Chinese tax withheld, the filing window).

16 Overview before any import. Your data mode with nothing uploaded: one empty-state card that links to My data. Ledger, Tax and Ask Atlas show the same card with their own sentence (§4).

17 Ledger in CNY, August, no rate file (full length). Every converted USD record shows its ECB rate, the rate's date and the source; Patreon Aug 1 uses the ECB rate of Fri Jul 31, Twitch Aug 15 and Contra Aug 16 that of Fri Aug 14, YouTube Aug 22 that of Fri Aug 21; Bilibili records stay in CNY. ¥33,135.05 net from ¥46,718.02 gross, complete. All numbers are the real `POST /api/personal/ledger` response for these fictional statements, with real ECB reference rates (`07-mockups/gen_ledger_v131.py`).

17b Ledger in CNY, August, with your rate file (full length). The demo CNY rate table uploaded as the user's rate file, with Aug 26 removed to show the stop: every converted record shows "Your rate file"; Upwork UW-2102 ($444.01, Wed Aug 26) has no rate, so the stop card names it, the row is left out and totals read incomplete (¥32,008.17 net). Also the real backend response.

v1.4 · all side income. The person is "You". Statements are C01's, with the demo rate tables uploaded as the rate files; manual income and expenses are C01's fixture (`daoshou_testdata/data/manual_entries.json`); every number comes from `POST /api/personal/overview` and `/ledger` in-process with the entries and the $6,000 goal in the body (`07-mockups/gen_data_v14.py`).

18 Add entry, expense (over the Ledger). Sep 10, $129.00, Education picked from the seven categories, the note "Online course: motion design" with the lock line.

18b Add entry, income. Sep 28, ¥900.00 CNY, source Tutoring (chips for your sources and "New source").

19 Ledger v1.4, September (full length). 41 rows: 35 platform records, 3 entries of your income (Tutoring, Logo commission, each converted at its own date's rate from your rate files) and 3 expenses. KPIs: $8,247.61 gross, −$2,119.88 fees, −$9.40 withheld, −$204.99 your expenses, $5,913.34 kept after expenses. "Add entry" sits beside "Add statements".

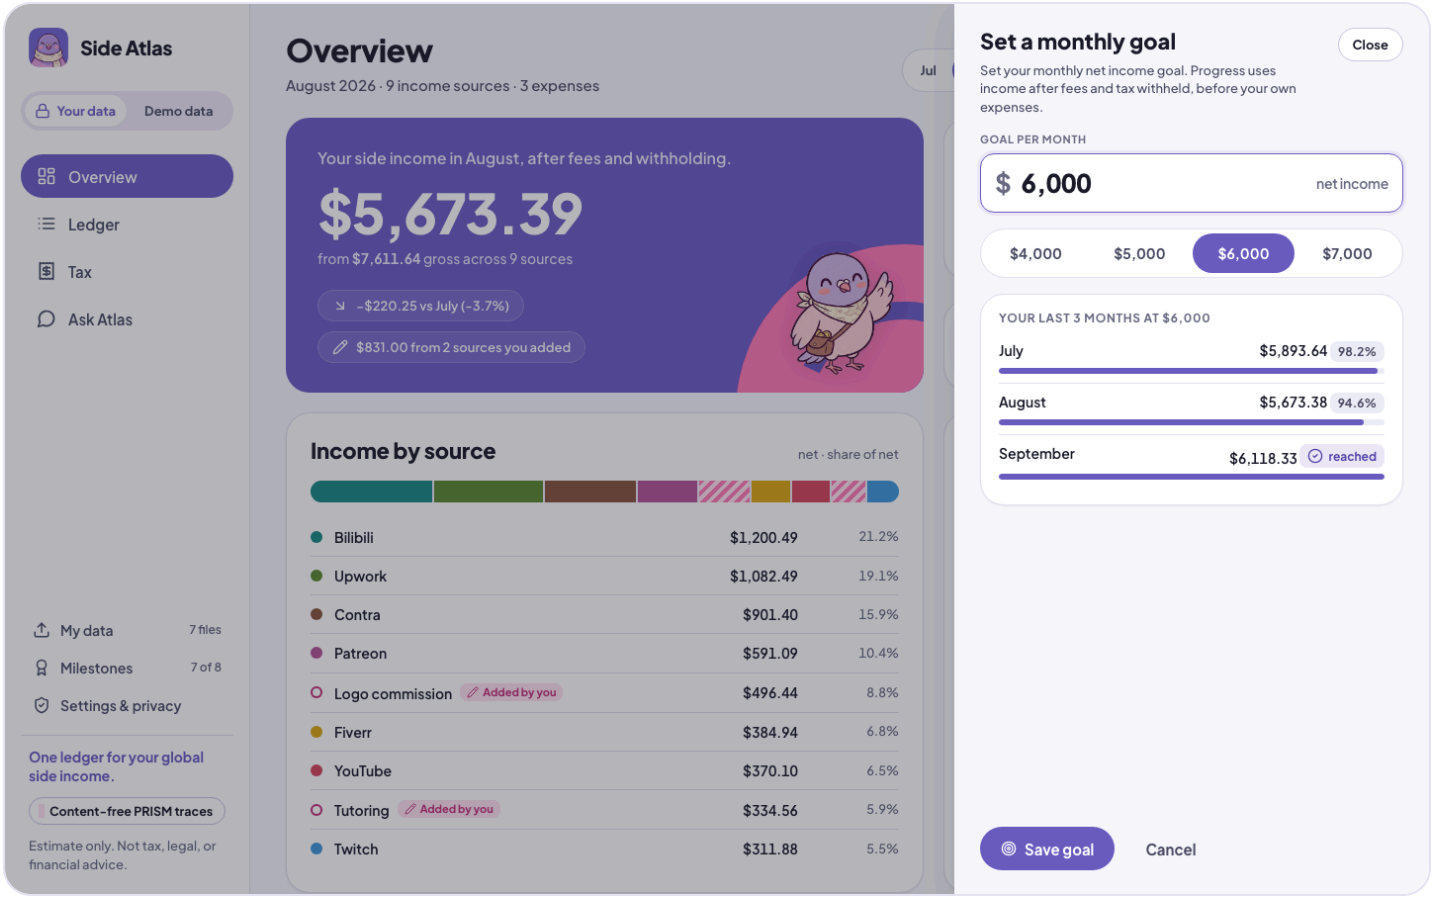

20 Overview v1.4, August. Hero $5,673.39 net from $7,611.64 gross across 9 sources (−$220.25 vs July, $831.00 from the 2 sources you added). The goal ended short: $5,673.38 of $6,000, $326.62 short (the goal sums unrounded values, the hero adds rounded parts: one cent apart, an open question). Latest

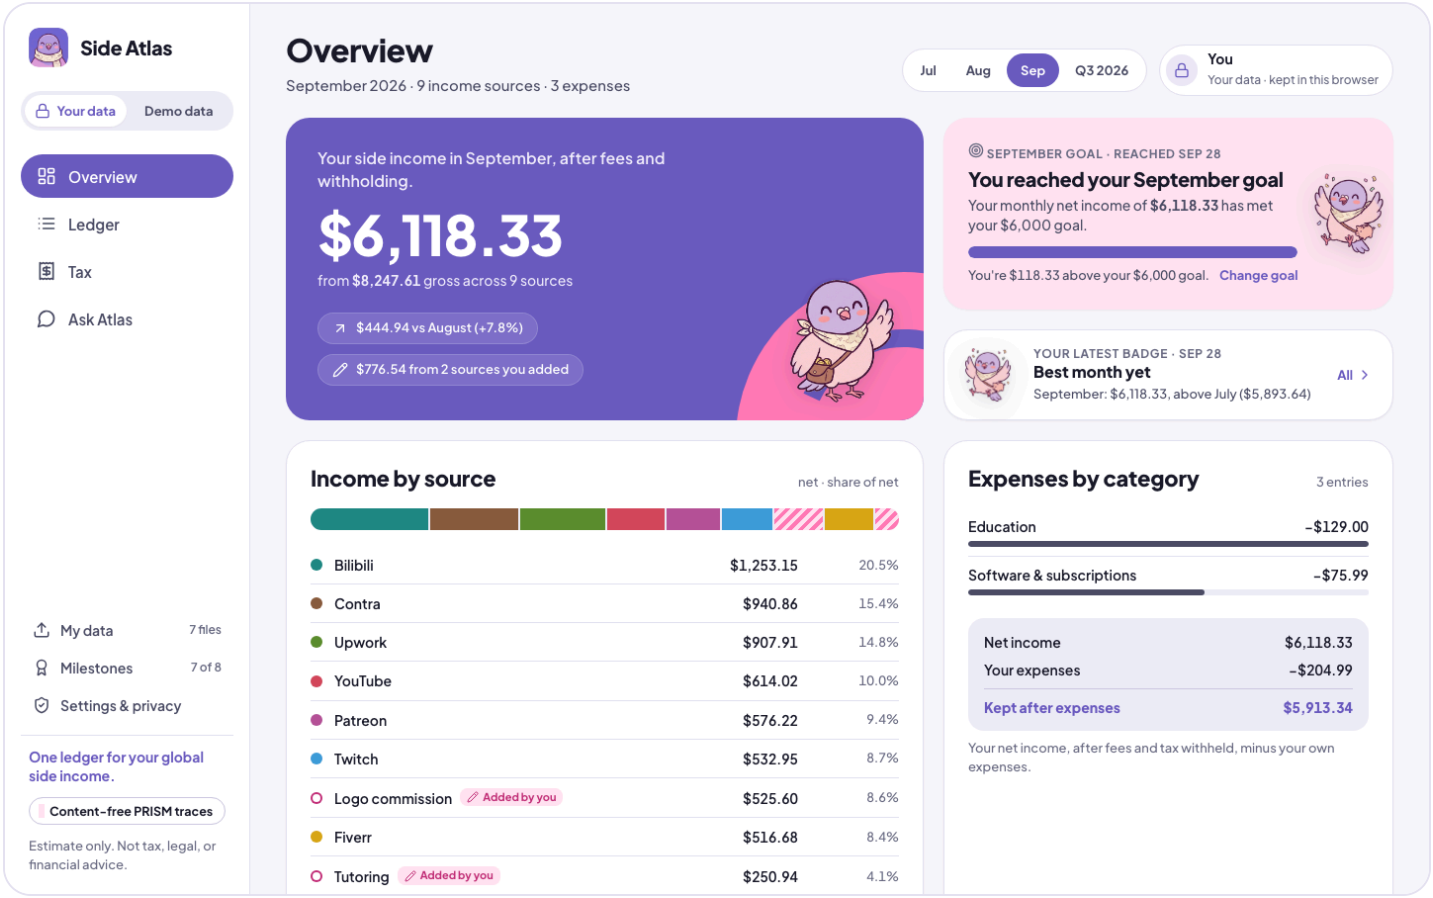

badge as of August: $10,000 milestone (Aug 21). Income by source with your sources striped and tagged; expenses by category; kept after expenses $5,318.39. August is shown because only September reached the fixture's $6,000 goal (22b).

21 Milestones. 7 of 8 earned as of September; the latest is Best month yet (Sep 28: $6,118.33, above July's $5,893.64). 3 months of growth is locked at 1 of 3. Every reason and date comes from the endpoint's `badges[]`.

22 Set a monthly goal (over Overview, August). $6,000 with presets, and your last three months at that amount: July 98.2%, August 94.6%, September reached.

22b Goal reached, September. $6,118.33 against $6,000, reached Sep 28, $118.33 above; the goal card turns pink-100 with Atlas celebrating. Latest badge: Best month yet.

09 Ask in Chinese, deferred. The UI is single-language (English for the demo); a language switch is deferred, so the Chinese Ask screen is out of the prototype.

---

6 · Mobile

Out of scope for v1 (desktop demo). Layouts must not break below 1280px; a phone layout is a later version.

---

7 · Notifications

Two levels only. **Stop** (light warning card + nav count badge; v1.1): missing exchange rate or any input the math needs; the run is marked failed in PRISM and the alert fires. **Note** (sage or warn-tint inline note): threshold and duplicate-report information, import results. No toasts.

8 · Fix list

ID	NEED	STATUS	WHAT REMAINS
F1	Multi-platform import (8 formats)	Covered	v1.1 Sources screen: upload zone, per-file import check, 8 platform cards.
F2	Currency unified, rate + date traceable per record	Covered	—
F3	Deduction breakdown, withholding on its own line	Covered	FX loss vs mid-market not modelled (rates are the conversion rates).
F4	Dashboard: net, share, best keep-rate, MoM	Covered	—
F5	Set-aside at the user's own rate + quarterly reminder	Covered	v1.1 Set-aside screen with presets, slider and number input.
F6	AI Q&A, every number from a calculation step	Covered	v1.1 Chinese Ask screen (real v2 steps).
F7	Monthly / quarterly report	Covered	PDF export styling = print of the sheet.
R1	Tax form ≠ what landed (1099-K gross, double reporting, no form below threshold)	Covered	Real form_check numbers; form types simulated, 1099-K threshold real.
R2	Opaque, undocumented platform fees	Covered	Per-record fee column; Fiverr tip fees visible.
R3	No tax set aside, quarterly deadlines	Covered	—
R4	Hidden withdrawal + FX cost	Partial	Payout fees shown; FX spread vs mid-market needs source data.
R5	Spreadsheets stitched by hand	Covered	—
F8	Your own data: upload statements only (v1.3)	Designed	Screens 10 and 11; build browser parsing and storage.
F9	Privacy: browser storage, stateless server, aggregates to the AI, content-free traces (v1.3)	Designed	Screen 12; build delete, export backup, pseudonymised labels, PRISM content-free mode.

F10	China tax home and CNY display (v1.3)	Designed	Screens 13 and 14; no Chinese tax is calculated.
F11	All side income: your own income entries and expenses (v1.4)	Designed	Screens 18, 19, 20; build entry storage in the browser and the endpoints.
F12	Rewards: monthly goal and milestone badges (v1.4)	Designed	Screens 20, 21, 22; endpoints exist (`goal` , `badges[]` on overview and report).
R6	Cross-border reporting (DAC7, 1042-S, which FX rate)	Needs source	Only CN withholding and per-date rates shown.

9 · Implementation

Import the drop-in, then build components from the reference styles:

`@import "05-css/side-atlas-align.css";` (fonts + tokens + base) · component classes from `05-css/side-atlas-ui-reference.css` · tokens also as `04-tokens/side-atlas-tokens.json` (W3C, Tokens Studio → Figma) and `.js` . Icons: include `03-icons/side-atlas-icons.js` , then `<svg class="sa-icon"><use href="#sa-i-tax"/></svg>` .

Release checks

- ☐ Each screen has exactly one hero colour field (count `.sa-hero` = 1).
- ☐ No text smaller than 48px sits on lime; no lime text below 48px.
- ☐ Every money figure uses tabular figures (`font-variant-numeric: tabular-nums`) and money columns are right-aligned.
- ☐ Tax withheld never uses the fee colour; fee columns are clay, withheld is tax blue.
- ☐ Every non-USD ledger row shows its rate and the rate's date.
- ☐ A missing rate shows the light warning card (hero stays forest, marked incomplete), names the record and leaves it out of totals — no estimated value anywhere on the page.
- ☐ Colours in pages come only from `--sa-*` tokens (no hex in markup or component CSS beyond the token file).
- ☐ Set-aside copy says the rate was chosen by the person; the disclaimer is visible on every screen.
- ☐ All ten 08-screens match the built pages side by side (ui-diff compare) with no clipped column at 1440×900.
- ☐ Only Plus Jakarta Sans (local woff2) and the CJK system font load; no CDN fonts.
- ☐ v1.3 · In Your data mode, no request to the server, Ask Atlas or PRISM carries a name, an account ID, an order number or a file (check the network log); accounts appear only as `acct ••NNNN` .

□ v1.3 · Delete all my data leaves this site's localStorage and IndexedDB empty and returns to screen 10.
□ v1.3 · The currency switch changes display only; switching back to USD shows the same figures as before.
□ v1.3.1 · Every converted amount in a CNY view carries a rate line with the rate, its date and its source; no converted figure appears without one.
□ v1.3.1 · No screen states an amount of tax owed, in either country.
□ v1.4 · A note on a manual entry never leaves the browser (check the network log); amounts, dates, currencies, sources and categories do.
□ v1.4 · The UI computes no badge and no goal state; both come from the backend response.
□ v1.4 · Expenses never use the fee, payout or tax colours; manual sources never use a platform colour.
□ v1.3.1 · One currency never mixes rate sources: with your rate file every converted record of it says "Your rate file"; without one every record shows an ECB rate.
□ Icons render from the sprite with currentColor; no emoji in the UI.
